

YOUR PRODUCT PACKAGE

Actually

Interactive Product Can Hero

Your product becomes the stage: a living 3D object, a pointer that opens a window into the brand, and scroll that reveals all, your product and presentation - restage it for any offer.

WHAT IS INSIDE

- Your background video link (and how to use the file)
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to customize text, colors, and the video look

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Save your background video somewhere easy to find. You can use the link below or the video file that came with this package.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Let the AI build everything.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF. You do not edit code by hand unless you want to.

YOUR BACKGROUND VIDEO LINK

<https://www.ClickMotion.dev/assets/videos/actually-hero-preview-v1.mp4>

Offline file name if you were given a file: actually-hero-preview-v1.mp4. A still image may be included next to your video file for a clean first frame.

Your background video

This is the film that plays behind the Actually design. Keep this link. It is also written inside every AI prompt below so your AI can attach it automatically.

VIDEO URL

<https://www.ClickMotion.dev/assets/videos/actually-hero-preview-v1.mp4>

File name: actually-hero-preview-v1.mp4

Client media is the 3D product pack (can mesh, label textures, studio HDRI). Storefront presentation shows the full hero: loader, pointer window, can grab, and scroll pin formula reveal (about 24-28 seconds).

Prefer the URL when online. If you were given a local download, tell your AI: "Use my local file actually-hero-preview-v1.mp4 as the full-screen background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium full-viewport website HERO for a CPG / beverage brand called Actually! (buyer will rebrand).

This is a PRODUCT-FIRST HERO. The vessel is the stage. Bone paper (#efede6) sits over ink (#1a1b1d). A giant heavy wordmark ACTUALLY. (with accent period in #bcd3d8) lives on the bone layer. A circular clip-path window peels into the ink studio where a React Three Fiber can (GLB) lives under studio HDRI. The circle follows the pointer on desktop. Scroll pins the hero about 120% of viewport height, expands the circle, soft-locks the can, and reveals left support copy (formula story). Mobile stacks wordmark, can (drag to spin), and formula without the pin clip.

CLIENT MEDIA (required - swap for buyer product):

- Mesh: <https://www.ClickMotion.dev/models/can.glb>
- Default label: <https://www.ClickMotion.dev/textures/labels/still-01-clear-2.png>
- Optional labels: still-02-dawn-2.png, still-03-dusk-2.png under /textures/labels/
- Studio HDRI: https://www.ClickMotion.dev/hdri/studio_small_03_1k.hdr (Environment background=false)
- Optional pack still: <https://www.ClickMotion.dev/assets/images/cans/actually-01.png>

LOOK AND FEEL - EDITORIAL CPG (not SaaS glass):

Bone paper + ink studio. Quiet Swiss restraint. Soft clear accent. Heavy geometric wordmark. Light display serif for support headline. Never purple mesh, never Motionsites pill docks, never free-play background film as the signature.

SIGNATURE A - POINTER WINDOW:

Desktop only. Bone paper layer over ink. Circle clip-path follows pointer with smooth lag. Entrance grows the radius. Soft halo ring tracks the window.

SIGNATURE B - LIVING 3D CAN:

useGLTF can, label texture on body, metal on rest, Environment HDRI, ContactShadows, drag-to-spin, subtle float after entrance drop.

SIGNATURE C - SCROLL PIN REVEAL:

Pin top top end +=120% scrub. Expand clip to cover, lock pointer blend, dolly scale slightly, fade bone wordmark layer, reveal support column (index, H2, rule, body, stats) past ~58% progress.

LOADER:

Bone curtain with brand mark and ingredient pop chips. Soft ~2.2s reveal with optional FLIP into hero H1.

LAYOUT:

Hero only - no forced site header/footer inside the component.

Desktop pin stage full viewport. Support column left on ink (hidden until scroll).

Mobile: no clip pin; stacked layout with drag spin.

TECHNICAL:

React + TypeScript. GSAP ScrollTrigger scrub. Lenis smooth scroll coupled to ScrollTrigger.update.

three + @react-three/fiber + @react-three/drei. Tailwind optional for utility classes.

prefers-reduced-motion: static product pose, readable copy, no long scrub required.

Single default-export component ActuallyHero.

CUSTOMIZATION LAW:

Every visible string, the mesh path, label maps, colors, and stats must be easy to replace. After the default builds, the buyer will tell their AI

Cursor prompt (continued)

to restage brand, formula, and product until it feels made for their CPG alone.

QUALITY BAR:

It should feel like a quiet tasting room - paper, light, a real vessel, formula that earns the scroll. Pointer invites. Scroll completes.

REFERENCE MOTION (storefront presentation of the full hero):

<https://www.ClickMotion.dev/assets/videos/actually-hero-preview-v1.mp4>

When done: I should see the full Actually experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

Build a premium full-viewport website HERO for a CPG / beverage brand called Actually! (buyer will rebrand).

Your Smart AI Agent prompt (continued)

CUSTOMIZATION LAW:

Every visible string, the mesh path, label maps, colors, and stats must be easy to replace. After the default builds, the buyer will tell their AI to restage brand, formula, and product until it feels made for their CPG alone.

QUALITY BAR:

It should feel like a quiet tasting room - paper, light, a real vessel, formula that earns the scroll. Pointer invites. Scroll completes.

REFERENCE MOTION (storefront presentation of the full hero):

<https://www.ClickMotion.dev/assets/videos/actually-hero-preview-v1.mp4>

When done: I should see the full Actually experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the brand wordmark

Ask your AI: "Change the hero wordmark from ACTUALLY. to [YOUR BRAND]. Keep the heavy geometric weight, giant sizing, and optional accent on the final glyph. Update the loader mark and aria-label to match."

Change taglines and meta

Ask your AI: "Change Actually? / Really. Actually. to [LINE 1] / [LINE 2] and the bottom-right meta to [CATEGORY LINE] / [LOCATION LINE]. Keep editorial spacing."

Change the formula story

Ask your AI: "Rewrite the support index, H2, body paragraph, and two stats for [PRODUCT STORY]. Keep the left column reveal on scroll."

Load your product mesh and labels

Ask your AI: "Replace /models/can.glb with [YOUR GLB PATH] and the label map with [YOUR LABEL PNG]. Keep metal vs label material split, studio HDRI, grab spin, and contact shadow."

Change colors

Ask your AI: "Change bone #efede6, ink #1a1b1d, and accent #bcd3d8 to [PAPER] / [STAGE] / [ACCENT]. Keep type readable on both layers."

Brand voice pass

Ask your AI: "Rewrite every visible string so the voice matches [BRAND VOICE]. Do not change pin length or 3D math unless I ask."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep Actually! as a product-first hero with pointer window, living 3D vessel, and scroll formula reveal. Do not ask me to write code."

New background video (optional)

Only if you want a different film. Open a video generation AI, paste the prompt below, generate a silent clip about 12 seconds long, then ask your coding AI to use your new file as the background.

COPY THIS INTO A VIDEO AI

This product does not require a looping background film. If generating marketing stills: premium beverage can on bone paper, studio light, editorial restraint, no watermarks. Or replace the GLB and label maps with the buyer's product.

Then tell your coding AI

Ask your AI: "Use my new video file [FILE NAME OR LINK] as the full-screen background. Keep the same Actually layout and behavior."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
