

# Studio Sequence

Camera pull-out billboard section

Start inside a full-bleed film. Scroll pulls the world out until that same film plays on a street billboard.

Any video. Full length. No cuts. Premium scroll camera.

Inside this package:

- Background / client film (pure Surreal, no UI frames)
- How to drop in your own video
- Per-tool AI prompts
- Customize without coding

# 01 Start here

1. Download this package and open the cleanroom files (or paste the buyer prompt).
2. Place the pure film at public/assets/videos/studio-surreal-v1.mp4  
(or keep the path already in the package).
3. Tell your AI: build Studio Sequence from BUYER\_PROMPT.md + studio-data.ts.
4. Open the live section. Scroll: full-bleed film → street billboard.
5. Film runs full length (~2 min 24s pure Surreal). Scroll never trims it.
6. To use your own film, see section 04. Keep loop + muted for autoplay.

## Pure billboard film (no UI frames)

/assets/videos/studio-surreal-v1.mp4

Source: Lab pure surreal.mp4 · full length · client HD

## 02 Background video (standalone)

This is pure cinema for the billboard - not a storefront UI capture.

Client HD URL / path:

`/assets/videos/studio-surreal-v1.mp4`

What the film is: Surreal Studio pure loop (no frames, no product UI).

Full duration plays on the board while scroll only moves the camera.

Backgrounds library (small encode of the SAME pure film):

`/assets/videos/backgrounds/studio-surreal-bg-v1.mp4`

Do not use `studio-sequence-preview-*.mp4` as the billboard source.

Those are storefront previews of the full section experience.

## 03 Per-tool ready prompts

Build Studio Sequence (MS-SEC-STUDIO01). React + GSAP ScrollTrigger + optional Lenis.

Use cleanroom studio-from-prompt: StudioSequence.tsx + studio-data.ts.

Default film: /assets/videos/studio-surreal-v1.mp4 (pure Surreal, no UI frames).

Plate: /assets/images/studio/ny.png. Pin +=280%, scrub 1.15.

CRITICAL: play the video FULL LENGTH. Never trim, never #t= fragments, never seek currentTime with scroll. Scroll only scales the world around the billboard.

Loop full file. Muted autoplay. No CSS color grade. object-fit cover on the board.

Any later custom video only changes videoSrc in studio-data.ts.

*Works in Cursor, Claude, Grok Build, Codex, Lovable, Bolt - paste as system task.*

## 04 Customize without coding

Ask your AI to change...

- Billboard video to my file at [path or URL]
- Keep the same Surreal pure film (default)
- Street plate image to [my facade still]
- Pin length to slower/faster pull-out ( $\pm 320\%$  /  $\pm 200\%$ )
- Scrub silk to 1.25
- Billboard rect measure if my plate differs

Full-length law (do not break):

Film always runs 0 to duration. Scroll never cuts appearance or time.

See CUSTOMIZATION.md in the cleanroom for full paste-ready prompts.

## 05 New background video (optional)

1. Generate or export a 16:9 (or any) H.264 MP4 - full duration you want.
2. Prefer yuv420p + faststart for browser autoplay.
3. Long films (60s-180s+) are welcome - this section never trims them.
4. Tell your coding AI:

Add my film as public/assets/videos/[slug]-v1.mp4

Set studio-data.ts videoSrc to that path.

Keep playFullLength, loop, no CSS grade, no scroll seek.

5. Optional: pure film poster still for posterSrc.

## 06 Close

Studio Sequence turns your film into architecture.  
Full length. Any video. One section.

Live demo path: /demo/cleanroom-studio

Product id: MS-SEC-STUDIO01
