

YOUR PRODUCT PACKAGE

Elyse

Pin-Until-Complete Wellness Scroll Hero

A private wellness retreat homepage where scroll advances a golden-hour sanctuary film - four chapters from call to return, ready for your AI coding tool.

WHAT IS INSIDE

- Your background video link (and how to use the file)
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to customize text, colors, and the video look

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Save your background video somewhere easy to find. You can use the link below or the video file that came with this package.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Let the AI build everything.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF. You do not edit code by hand unless you want to.

YOUR BACKGROUND VIDEO LINK

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

Offline file name if you were given a file: elyse-nature-v1.mp4. A still image may be included next to your video file for a clean first frame.

Your background video

This is the film that plays behind the Elyse design. Keep this link. It is also written inside every AI prompt below so your AI can attach it automatically.

VIDEO URL

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

File name: elyse-nature-v1.mp4

What the film shows: two monumental tree faces (warm and cool) meeting over a golden-hour valley river landscape - dual nature forms, luminous sun between them. About 10 seconds, silent, 24fps, already remastered for PS4 reverse (H.264 GOP 3, no B-frames). If you replace it, re-encode the same way before wiring.

Prefer the URL when online. If you were given a local download, tell your AI: "Use my local file elyse-nature-v1.mp4 as the full-screen background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium scroll-as-narrative website HERO for a private luxury wellness retreat house called ELYSE.

BACKGROUND VIDEO (required - SCROLL SCRUB, not simple autoplay loop):

Use this video as the full-screen hero film:

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

If the user has a local file named elyse-nature-v1.mp4, use that path instead of downloading.

The video is silent. Do not autoplay as a looping wallpaper. VIRTUAL PROGRESS controls which moment of the video is shown (scroll scrub). When the visitor scrolls the journey forward, the video advances. When they scroll back, it goes backward.

object-fit cover, object-position center about 48% vertical so the dual tree faces and sun stay framed.

LOOK AND FEEL - PRIVATE LUXURY WELLNESS (not spa SaaS):

Stage ink #0B0907. Cream type #F4EDE3 / #F7F1E8. Soft gold #C9A46A and warm highlight #F0D9A8.

Display: Cormorant Garamond (or fine editorial serif). Utility: Inter light.

Quiet Aman / Six Senses restraint. Invitation only. Never cream Aether wellness app. Never climate Terra green. Never pearl Revel fashion. Never Motionsites pill docks. Never purple mesh.

SIGNATURE:

Optional soft gold filament at about 46% height where the two nature faces meet - subtle, never competing with type.

LAYOUT AND MOTION LAW (PIN-UNTIL-COMPLETE + PSAVE / Perfect Scroll Video Engine - mandatory - do NOT build a tall multi-vh page scroll track):

One pinned full-viewport stage (100dvh). Wheel / trackpad / touch / arrow keys AIM a destination on a 3.6-viewport track (same distance as the old 460vh track). Raw 1:1. No wheel gain. No swipe cap. No GSAP lag.

PSAVE: Down-scroll PLAYS the film forward at 1.2x (muted play() at playbackRate 1.2). Up-scroll PLAYS it backward at the same 1.2x by walking the live video exactly one 3-frame step (0.125s at 24fps) per seek. NEVER jump a frame. NEVER assign currentTime to the destination. A tiny click creeps a few frames. A crazy scroll may aim halfway through the movie - the film still plays normally to that moment. THE LIFT (by design): leftover dest keeps the film going a little after they stop - friction, then a graceful stop, never a tire screech.

Ignore tiny opposite trackpad ticks so dest is not snapped dead. First real opposite gesture cancels a leftover destination and starts from the picture. Reverse starts WHILE they are still scrolling (220ms live window), then continues the same 3-frame steps after they stop. Wait for seeked before the next reverse step. No canvas buffer. No loop. If a replacement film is long or eventful (slow then a kick) and leftover dest dies, dest must sit at least 0.55s of film ahead after last intent and forward rate eases over that last half-second. Size a replacement aim track to the story beat, not another SKU's number.

Copy, chapters, and the gold bar follow the PICTURE, not the wheel destination.

Release ONLY when the picture has arrived at 0 (scroll up) or 1 (scroll down). Test live currentTime as well as the playhead (settle can stop one frame short). Do not unpin because the destination already hit an end. After release the PAGE owns scroll until the stage docks at the top. Pointer on the membership band must never drive the film.

Optional capture helper: window.__msScrollNarrative.setProgress(0..1) may snap. getProgress is the playhead. getTarget is the destination.

Top nav: brand ELYSE + Private Wellness Retreats, center links Retreats Places Practice Membership, right "Request invitation".

Thin gold progress bar under the nav driven by the playhead.

Four chapters swap as the playhead advances (lower-left copy, right index rail 01-04):

- 1) The call - "The earth is / still waiting." Beyond the noise, places where light moves slower.
- 2) The land - "Sanctuaries, / not destinations." Remote valleys, quiet coasts, forests that remember.
- 3) The practice - "Days shaped / by intention." Guided rest, bodywork, table and trail.
- 4) The return - "Leave whole. / Return clear." with CTAs Begin a private inquiry and View the calendar.

Closing membership band AFTER the pin releases: "For those who measure wealth in stillness." Stats 12 sanctuaries / 6 continents / 8

Cursor prompt (continued)

guests max. Request an introduction.

HOW TO BUILD IT (mandatory algorithm - do not invent another method):

1. One 100dvh stage in normal document flow. The membership band is the NEXT sibling. Do not overflow-hidden the page.
 2. Hold a DESTINATION 0 to 1 and a PLAYHEAD that is whatever the video is showing. Do not set the mid-film poster (elyse-nature-v1.webp, heads down) as the HTML video poster. Kick-seek 0.04 then 0, wait seeked, fade the film in so first paint is heads up. Reduced motion may use that poster as a stage fallback and seek to about 0.42.
 3. Gestures add deltaPx / (3.6 * window height) to the DESTINATION only.
 4. Wheel and trackpad: ignore ctrl/meta zoom. Normalize deltaMode. Map raw delta 1:1 onto the 3.6 track. Apply once per animation frame. preventDefault while the pin owns the gesture.
 5. Touch is also destination-only on the 3.6 track. Do not trap Space on a focused button.
 6. PSAVE: each animation frame, walk the picture toward destination * duration at 1.2x, never more than 1/24 second of film in one forward fallback tick. Down: play() at playbackRate 1.2. After they lift, leftover dest keeps play going a little, then it arrives and pauses. Ignore tiny opposite ticks. Up: first real up-scroll snaps destination to the picture, then walk currentTime backward exactly 0.125s per seek on the live video. No low-res buffer. No loop.
 7. If the PICTURE is at 0 and they scroll up, or the PICTURE is at 1 and they scroll down, RELEASE so the membership band can scroll into view. If the destination is already at an end but the picture is still walking, keep the pin. After release, page-owns until the stage docks. Ignore wheel events whose target is the band.
 8. Reduced motion: still mid-film frame around 0.42. No chase.
 9. FILM ENCODE: the shipped elyse-nature-v1.mp4 is H.264 GOP 3, no B-frames, 81 I-frames. If you replace the video, re-encode first: `ffmpeg -an -c:v libx264 -crf 16 -g 3 -keyint_min 3 -bf 0 -sc_threshold 0 -movflags +faststart`. A one-I-frame file will stall mid-reverse then jump near the start. Do not extract PNG frames.
- If you are about to write ScrollTrigger.create, position sticky, a 460vh spacer, or video.currentTime = target * duration on a large jump, stop and use this algorithm instead.
- Do not copy Vertex or Revel seek-scrub. Elyse gold is PSAVE at 1.2x forward and reverse (every 3rd frame) on a 3.6 viewport aim track.
- PACK DELIVERY: This product ships as a buyer manual PDF plus the sold prompt. There is no files zip and no START-HERE folder. Rebuild from this brief and the video URL (or local elyse-nature-v1.mp4).

TECHNICAL:

Use a modern web stack that works in the tool I am using. Prefer one main page component (or ElyseScrollNarrative.tsx). Scroll aims. The film plays to that moment. Video attributes: muted, playsInline, preload ready, no wallpaper loop, no HTML mid-film poster. Support reduced-motion: show a still mid-film frame (~0.42) and no chase. Keep cream type readable with earth veils - never crush the luminous center sun/faces. NEVER use a tall sticky multi-vh document track as the method. NEVER seek currentTime across a jump. NEVER drive the film from the membership band after release.

Single default-export component ElyseScrollNarrative. Props: brand, backgroundSrc, posterSrc.

QUALITY BAR:

It should feel like a private wellness house for people who measure wealth in stillness. One clear system: PSAVE (Perfect Scroll Video Engine) on pin-until-complete. Scroll aims. The sanctuary film plays forward at 1.2x and reverse every 3rd frame, never jumps a frame, and on lift leftover dest keeps going a little then friction-stops. After the last frame the page owns the runway. Not a hotel chain. Not a spa SaaS landing page.

When done: I should see the full Elyse experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Build a premium scroll-as-narrative website HERO for a private luxury wellness retreat house called ELYSE.

BACKGROUND VIDEO (required - SCROLL SCRUB, not simple autoplay loop):

Use this video as the full-screen hero film:

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

If the user has a local file named elyse-nature-v1.mp4, use that path instead of downloading.

The video is silent. Do not autoplay as a looping wallpaper. VIRTUAL PROGRESS controls which moment of the video is shown (scroll scrub). When the visitor scrolls the journey forward, the video advances. When they scroll back, it goes backward.

object-fit cover, object-position center about 48% vertical so the dual tree faces and sun stay framed.

LOOK AND FEEL - PRIVATE LUXURY WELLNESS (not spa SaaS):

Stage ink #0B0907. Cream type #F4EDE3 / #F7F1E8. Soft gold #C9A46A and warm highlight #F0D9A8.

Display: Cormorant Garamond (or fine editorial serif). Utility: Inter light.

Quiet Aman / Six Senses restraint. Invitation only. Never cream Aether wellness app. Never climate Terra green. Never pearl Revel fashion. Never Motionsites pill docks. Never purple mesh.

SIGNATURE:

Optional soft gold filament at about 46% height where the two nature faces meet - subtle, never competing with type.

LAYOUT AND MOTION LAW (PIN-UNTIL-COMPLETE + PSAVE / Perfect Scroll Video Engine - mandatory - do NOT build a tall multi-vh page scroll track):

One pinned full-viewport stage (100dvh). Wheel / trackpad / touch / arrow keys AIM a destination on a 3.6-viewport track (same distance as the old 460vh track). Raw 1:1. No wheel gain. No swipe cap. No GSAP lag.

PSAVE: Down-scroll PLAYS the film forward at 1.2x (muted play() at playbackRate 1.2). Up-scroll PLAYS it backward at the same 1.2x by walking the live video exactly one 3-frame step (0.125s at 24fps) per seek. NEVER jump a frame. NEVER assign currentTime to the destination. A tiny click creeps a few frames. A crazy scroll may aim halfway through the movie - the film still plays normally to that moment. THE LIFT (by design): leftover dest keeps the film going a little after they stop - friction, then a graceful stop, never a tire screech. Ignore tiny opposite trackpad ticks so dest is not snapped dead. First real opposite gesture cancels a leftover destination and starts from the picture. Reverse starts WHILE they are still scrolling (220ms live window), then continues the same 3-frame steps after they stop. Wait for seeked before the next reverse step. No canvas buffer. No loop. If a replacement film is long or eventful (slow then a kick) and leftover dest dies, dest must sit at least 0.55s of film ahead after last intent and forward rate eases over that last half-second. Size a replacement aim track to the story beat, not another SKU's number.

Copy, chapters, and the gold bar follow the PICTURE, not the wheel destination.

Release ONLY when the picture has arrived at 0 (scroll up) or 1 (scroll down). Test live currentTime as well as the playhead (settle can stop one frame short). Do not unpin because the destination already hit an end. After release the PAGE owns scroll until the stage docks at the top. Pointer on the membership band must never drive the film.

Optional capture helper: window.__msScrollNarrative.setProgress(0..1) may snap. getProgress is the playhead. getTarget is the destination.

Top nav: brand ELYSE + Private Wellness Retreats, center links Retreats Places Practice Membership, right "Request invitation".

Thin gold progress bar under the nav driven by the playhead.

Four chapters swap as the playhead advances (lower-left copy, right index rail 01-04):

- 1) The call - "The earth is / still waiting." Beyond the noise, places where light moves slower.
- 2) The land - "Sanctuaries, / not destinations." Remote valleys, quiet coasts, forests that remember.
- 3) The practice - "Days shaped / by intention." Guided rest, bodywork, table and trail.
- 4) The return - "Leave whole. / Return clear." with CTAs Begin a private inquiry and View the calendar.

Lovable prompt (continued)

Closing membership band AFTER the pin releases: "For those who measure wealth in stillness." Stats 12 sanctuaries / 6 continents / 8 guests max. Request an introduction.

HOW TO BUILD IT (mandatory algorithm - do not invent another method):

1. One 100dvh stage in normal document flow. The membership band is the NEXT sibling. Do not overflow-hidden the page.
 2. Hold a DESTINATION 0 to 1 and a PLAYHEAD that is whatever the video is showing. Do not set the mid-film poster (elyse-nature-v1.webp, heads down) as the HTML video poster. Kick-seek 0.04 then 0, wait seeked, fade the film in so first paint is heads up. Reduced motion may use that poster as a stage fallback and seek to about 0.42.
 3. Gestures add deltaPx / (3.6 * window height) to the DESTINATION only.
 4. Wheel and trackpad: ignore ctrl/meta zoom. Normalize deltaMode. Map raw delta 1:1 onto the 3.6 track. Apply once per animation frame. preventDefault while the pin owns the gesture.
 5. Touch is also destination-only on the 3.6 track. Do not trap Space on a focused button.
 6. PSAVE: each animation frame, walk the picture toward destination * duration at 1.2x, never more than 1/24 second of film in one forward fallback tick. Down: play() at playbackRate 1.2. After they lift, leftover dest keeps play going a little, then it arrives and pauses. Ignore tiny opposite ticks. Up: first real up-scroll snaps destination to the picture, then walk currentTime backward exactly 0.125s per seek on the live video. No low-res buffer. No loop.
 7. If the PICTURE is at 0 and they scroll up, or the PICTURE is at 1 and they scroll down, RELEASE so the membership band can scroll into view. If the destination is already at an end but the picture is still walking, keep the pin. After release, page-owns until the stage docks. Ignore wheel events whose target is the band.
 8. Reduced motion: still mid-film frame around 0.42. No chase.
 9. FILM ENCODE: the shipped elyse-nature-v1.mp4 is H.264 GOP 3, no B-frames, 81 I-frames. If you replace the video, re-encode first: `ffmpeg -an -c:v libx264 -crf 16 -g 3 -keyint_min 3 -bf 0 -sc_threshold 0 -movflags +faststart`. A one-I-frame file will stall mid-reverse then jump near the start. Do not extract PNG frames.
- If you are about to write ScrollTrigger.create, position sticky, a 460vh spacer, or video.currentTime = target * duration on a large jump, stop and use this algorithm instead.
- Do not copy Vertex or Revel seek-scrub. Elyse gold is PSAVE at 1.2x forward and reverse (every 3rd frame) on a 3.6 viewport aim track.
- PACK DELIVERY: This product ships as a buyer manual PDF plus the sold prompt. There is no files zip and no START-HERE folder. Rebuild from this brief and the video URL (or local elyse-nature-v1.mp4).

TECHNICAL:

Use a modern web stack that works in the tool I am using. Prefer one main page component (or ElyseScrollNarrative.tsx). Scroll aims. The film plays to that moment. Video attributes: muted, playsInline, preload ready, no wallpaper loop, no HTML mid-film poster. Support reduced-motion: show a still mid-film frame (~0.42) and no chase. Keep cream type readable with earth veils - never crush the luminous center sun/faces. NEVER use a tall sticky multi-vh document track as the method. NEVER seek currentTime across a jump. NEVER drive the film from the membership band after release.

Single default-export component ElyseScrollNarrative. Props: brand, backgroundSrc, posterSrc.

QUALITY BAR:

It should feel like a private wellness house for people who measure wealth in stillness. One clear system: PSAVE (Perfect Scroll Video Engine) on pin-until-complete. Scroll aims. The sanctuary film plays forward at 1.2x and reverse every 3rd frame, never jumps a frame, and on lift leftover dest keeps going a little then friction-stops. After the last frame the page owns the runway. Not a hotel chain. Not a spa SaaS landing page.

When done: I should see the full Elyse experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Codex / ChatGPT

Select everything in the box area below (all parts if more than one page). Copy, then paste into Codex / ChatGPT. You do not need to understand the technical lines. Your AI does.

You are Codex / ChatGPT acting as my coding agent. Build a complete, production-ready web section or page. Create clear files, install what you need, and leave me a working result. Explain briefly what you built in plain language when finished.

Build a premium scroll-as-narrative website HERO for a private luxury wellness retreat house called ELYSE.

BACKGROUND VIDEO (required - SCROLL SCRUB, not simple autoplay loop):

Use this video as the full-screen hero film:

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

If the user has a local file named elyse-nature-v1.mp4, use that path instead of downloading.

The video is silent. Do not autoplay as a looping wallpaper. VIRTUAL PROGRESS controls which moment of the video is shown (scroll scrub). When the visitor scrolls the journey forward, the video advances. When they scroll back, it goes backward.

object-fit cover, object-position center about 48% vertical so the dual tree faces and sun stay framed.

LOOK AND FEEL - PRIVATE LUXURY WELLNESS (not spa SaaS):

Stage ink #0B0907. Cream type #F4EDE3 / #F7F1E8. Soft gold #C9A46A and warm highlight #F0D9A8.

Display: Cormorant Garamond (or fine editorial serif). Utility: Inter light.

Quiet Aman / Six Senses restraint. Invitation only. Never cream Aether wellness app. Never climate Terra green. Never pearl Revel fashion. Never Motionsites pill docks. Never purple mesh.

SIGNATURE:

Optional soft gold filament at about 46% height where the two nature faces meet - subtle, never competing with type.

LAYOUT AND MOTION LAW (PIN-UNTIL-COMPLETE + PSAVE / Perfect Scroll Video Engine - mandatory - do NOT build a tall multi-vh page scroll track):

One pinned full-viewport stage (100dvh). Wheel / trackpad / touch / arrow keys AIM a destination on a 3.6-viewport track (same distance as the old 460vh track). Raw 1:1. No wheel gain. No swipe cap. No GSAP lag.

PSAVE: Down-scroll PLAYS the film forward at 1.2x (muted play() at playbackRate 1.2). Up-scroll PLAYS it backward at the same 1.2x by walking the live video exactly one 3-frame step (0.125s at 24fps) per seek. NEVER jump a frame. NEVER assign currentTime to the destination. A tiny click creeps a few frames. A crazy scroll may aim halfway through the movie - the film still plays normally to that moment. THE LIFT (by design): leftover dest keeps the film going a little after they stop - friction, then a graceful stop, never a tire screech. Ignore tiny opposite trackpad ticks so dest is not snapped dead. First real opposite gesture cancels a leftover destination and starts from the picture. Reverse starts WHILE they are still scrolling (220ms live window), then continues the same 3-frame steps after they stop. Wait for seeked before the next reverse step. No canvas buffer. No loop. If a replacement film is long or eventful (slow then a kick) and leftover dest dies, dest must sit at least 0.55s of film ahead after last intent and forward rate eases over that last half-second. Size a replacement aim track to the story beat, not another SKU's number.

Copy, chapters, and the gold bar follow the PICTURE, not the wheel destination.

Release ONLY when the picture has arrived at 0 (scroll up) or 1 (scroll down). Test live currentTime as well as the playhead (settle can stop one frame short). Do not unpin because the destination already hit an end. After release the PAGE owns scroll until the stage docks at the top. Pointer on the membership band must never drive the film.

Optional capture helper: window.__msScrollNarrative.setProgress(0..1) may snap. getProgress is the playhead. getTarget is the destination.

Top nav: brand ELYSE + Private Wellness Retreats, center links Retreats Places Practice Membership, right "Request invitation".

Thin gold progress bar under the nav driven by the playhead.

Four chapters swap as the playhead advances (lower-left copy, right index rail 01-04):

- 1) The call - "The earth is / still waiting." Beyond the noise, places where light moves slower.
- 2) The land - "Sanctuaries, / not destinations." Remote valleys, quiet coasts, forests that remember.
- 3) The practice - "Days shaped / by intention." Guided rest, bodywork, table and trail.
- 4) The return - "Leave whole. / Return clear." with CTAs Begin a private inquiry and View the calendar.

You choose the stack that works in my environment, create every file, wire the background video, and deliver a polished preview. Do not leave steps for me that require writing code. When finished, explain in plain English how I view and share the result.

Build a premium scroll-as-narrative website HERO for a private luxury wellness retreat house called ELYSE.

BACKGROUND VIDEO (required - SCROLL SCRUB, not simple autoplay loop):

Use this video as the full-screen hero film:

<https://www.ClickMotion.dev/assets/videos/elyse-nature-v1.mp4>

If the user has a local file named elyse-nature-v1.mp4, use that path instead of downloading.

The video is silent. Do not autoplay as a looping wallpaper. VIRTUAL PROGRESS controls which moment of the video is shown (scroll scrub). When the visitor scrolls the journey forward, the video advances. When they scroll back, it goes backward.

object-fit cover, object-position center about 48% vertical so the dual tree faces and sun stay framed.

LOOK AND FEEL - PRIVATE LUXURY WELLNESS (not spa SaaS):

Stage ink #0B0907. Cream type #F4EDE3 / #F7F1E8. Soft gold #C9A46A and warm highlight #F0D9A8.

Display: Cormorant Garamond (or fine editorial serif). Utility: Inter light.

Quiet Aman / Six Senses restraint. Invitation only. Never cream Aether wellness app. Never climate Terra green. Never pearl Revel fashion. Never Motionsites pill docks. Never purple mesh.

SIGNATURE:

Optional soft gold filament at about 46% height where the two nature faces meet - subtle, never competing with type.

LAYOUT AND MOTION LAW (PIN-UNTIL-COMPLETE + PSAVE / Perfect Scroll Video Engine - mandatory - do NOT build a tall multi-vh page scroll track):

One pinned full-viewport stage (100dvh). Wheel / trackpad / touch / arrow keys AIM a destination on a 3.6-viewport track (same distance as the old 460vh track). Raw 1:1. No wheel gain. No swipe cap. No GSAP lag.

PSAVE: Down-scroll PLAYS the film forward at 1.2x (muted play() at playbackRate 1.2). Up-scroll PLAYS it backward at the same 1.2x by walking the live video exactly one 3-frame step (0.125s at 24fps) per seek. NEVER jump a frame. NEVER assign currentTime to the destination. A tiny click creeps a few frames. A crazy scroll may aim halfway through the movie - the film still plays normally to that moment. THE LIFT (by design): leftover dest keeps the film going a little after they stop - friction, then a graceful stop, never a tire screech. Ignore tiny opposite trackpad ticks so dest is not snapped dead. First real opposite gesture cancels a leftover destination and starts from the picture. Reverse starts WHILE they are still scrolling (220ms live window), then continues the same 3-frame steps after they stop. Wait for seeked before the next reverse step. No canvas buffer. No loop. If a replacement film is long or eventful (slow then a kick) and leftover dest dies, dest must sit at least 0.55s of film ahead after last intent and forward rate eases over that last half-second. Size a replacement aim track to the story beat, not another SKU's number.

Copy, chapters, and the gold bar follow the PICTURE, not the wheel destination.

Release ONLY when the picture has arrived at 0 (scroll up) or 1 (scroll down). Test live currentTime as well as the playhead (settle can stop one frame short). Do not unpin because the destination already hit an end. After release the PAGE owns scroll until the stage docks at the top. Pointer on the membership band must never drive the film.

Optional capture helper: window.__msScrollNarrative.setProgress(0..1) may snap. getProgress is the playhead. getTarget is the destination.

Top nav: brand ELYSE + Private Wellness Retreats, center links Retreats Places Practice Membership, right "Request invitation".

Thin gold progress bar under the nav driven by the playhead.

Four chapters swap as the playhead advances (lower-left copy, right index rail 01-04):

- 1) The call - "The earth is / still waiting." Beyond the noise, places where light moves slower.
- 2) The land - "Sanctuaries, / not destinations." Remote valleys, quiet coasts, forests that remember.
- 3) The practice - "Days shaped / by intention." Guided rest, bodywork, table and trail.

Your Smart AI Agent prompt (continued)

4) The return - "Leave whole. / Return clear." with CTAs Begin a private inquiry and View the calendar.
Closing membership band AFTER the pin releases: "For those who measure wealth in stillness." Stats 12 sanctuaries / 6 continents / 8 guests max. Request an introduction.

HOW TO BUILD IT (mandatory algorithm - do not invent another method):

1. One 100dvh stage in normal document flow. The membership band is the NEXT sibling. Do not overflow-hidden the page.
 2. Hold a DESTINATION 0 to 1 and a PLAYHEAD that is whatever the video is showing. Do not set the mid-film poster (elyse-nature-v1.webp, heads down) as the HTML video poster. Kick-see 0.04 then 0, wait seeked, fade the film in so first paint is heads up. Reduced motion may use that poster as a stage fallback and seek to about 0.42.
 3. Gestures add deltaPx / (3.6 * window height) to the DESTINATION only.
 4. Wheel and trackpad: ignore ctrl/meta zoom. Normalize deltaMode. Map raw delta 1:1 onto the 3.6 track. Apply once per animation frame. preventDefault while the pin owns the gesture.
 5. Touch is also destination-only on the 3.6 track. Do not trap Space on a focused button.
 6. PSAVE: each animation frame, walk the picture toward destination * duration at 1.2x, never more than 1/24 second of film in one forward fallback tick. Down: play() at playbackRate 1.2. After they lift, leftover dest keeps play going a little, then it arrives and pauses. Ignore tiny opposite ticks. Up: first real up-scroll snaps destination to the picture, then walk currentTime backward exactly 0.125s per seek on the live video. No low-res buffer. No loop.
 7. If the PICTURE is at 0 and they scroll up, or the PICTURE is at 1 and they scroll down, RELEASE so the membership band can scroll into view. If the destination is already at an end but the picture is still walking, keep the pin. After release, page-owns until the stage docks. Ignore wheel events whose target is the band.
 8. Reduced motion: still mid-film frame around 0.42. No chase.
 9. FILM ENCODE: the shipped elyse-nature-v1.mp4 is H.264 GOP 3, no B-frames, 81 I-frames. If you replace the video, re-encode first: `ffmpeg -an -c:v libx264 -crf 16 -g 3 -keyint_min 3 -bf 0 -sc_threshold 0 -movflags +faststart`. A one-I-frame file will stall mid-reverse then jump near the start. Do not extract PNG frames.
- If you are about to write ScrollTrigger.create, position sticky, a 460vh spacer, or video.currentTime = target * duration on a large jump, stop and use this algorithm instead.
- Do not copy Vertx or Revel seek-scrub. Elyse gold is PSAVE at 1.2x forward and reverse (every 3rd frame) on a 3.6 viewport aim track.
- PACK DELIVERY: This product ships as a buyer manual PDF plus the sold prompt. There is no files zip and no START-HERE folder. Rebuild from this brief and the video URL (or local elyse-nature-v1.mp4).

TECHNICAL:

Use a modern web stack that works in the tool I am using. Prefer one main page component (or ElyseScrollNarrative.tsx). Scroll aims. The film plays to that moment. Video attributes: muted, playsInline, preload ready, no wallpaper loop, no HTML mid-film poster. Support reduced-motion: show a still mid-film frame (~0.42) and no chase. Keep cream type readable with earth veils - never crush the luminous center sun/faces. NEVER use a tall sticky multi-vh document track as the method. NEVER seek currentTime across a jump. NEVER drive the film from the membership band after release.

Single default-export component ElyseScrollNarrative. Props: brand, backgroundSrc, posterSrc.

QUALITY BAR:

It should feel like a private wellness house for people who measure wealth in stillness. One clear system: PSAVE (Perfect Scroll Video Engine) on pin-until-complete. Scroll aims. The sanctuary film plays forward at 1.2x and reverse every 3rd frame, never jumps a frame, and on lift leftover dest keeps going a little then friction-stops. After the last frame the page owns the runway. Not a hotel chain. Not a spa SaaS landing page.

When done: I should see the full Elyse experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the brand name

Ask your AI: "Change the brand name ELYSE to [YOUR BRAND] everywhere, including the top left wordmark and membership copy."

Change chapter headlines

Ask your AI: "Rewrite the four chapter titles to [YOUR FOUR PAIRS OF LINES]. Keep Cormorant serif and cream type on the film."

Change chapter bodies

Ask your AI: "Rewrite each chapter body paragraph to [YOUR COPY]. Keep short editorial lines under 180 characters."

Change the CTA

Ask your AI: "Rename Begin a private inquiry to [PRIMARY] and View the calendar to [SECONDARY]. Keep cream primary and ghost secondary."

Change membership band

Ask your AI: "Change For those who measure wealth in stillness. to [YOUR LINE] and update the three stats."

Use a different background video

Ask your AI: "Replace the sanctuary film with [YOUR VIDEO LINK OR FILE]. Re-encode it for PSAVE reverse first: H.264, no audio, GOP 3, no B-frames, crf 16, +faststart. Then wire backgroundSrc to that remastered file. Keep PSAVE: scroll aims on 3.6 viewports 1:1, play forward at 1.2x, reverse every 3rd frame on the live video, leftover dest on lift so the film keeps going a little then friction-stops, never jump a frame. If the new film is long or eventful, size the aim track to the story beat and add a 0.55s dest floor if the stop becomes a screech. Do not set a mid-film still as the HTML poster. Silent, no wallpaper loop."

Make it work on phones

Ask your AI: "Improve mobile so nav stays clean, chapters remain readable, and the pin-until-complete experience still feels premium. Keep luxury restraint."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep the Elyse earth-ink / cream / gold wellness style and PSAVE (pin-until-complete, 3.6 viewport aim 1:1, play 1.2x forward, reverse every 3rd frame, leftover dest on lift, release only when the picture arrives, page owns the runway after). Do not seek currentTime across a jump. Do not copy Vertex or old Revel wheel-gain. Do not build a tall multi-vh scroll track. Do not ask me to write code."

New background video (optional)

Only if you want a different film. Open a video generation AI, paste the prompt below, generate a silent clip about 12 seconds long, then ask your coding AI to use your new file as the background.

COPY THIS INTO A VIDEO AI

Cinematic 4K silent narrative, about 10 seconds, 24fps. Two ancient trees formed as human faces facing each other over a river valley at golden hour, warm and cool duality, sun between them. Mythic, serene, no logos, no UI text, no watermark.

Then tell your coding AI

Ask your AI: "Use my new video file [FILE NAME OR LINK] as the full-screen background. Keep the same Elyse layout and behavior."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
