

YOUR PRODUCT PACKAGE

Meridian

Pin-Until-Complete Scroll Narrative Hero

A cinematic luxury real estate homepage that moves with pin-until-complete scroll. Quiet, expensive, and ready to build with your favorite AI coding tool.

WHAT IS INSIDE

- Your background video link (and how to use the file)
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to customize text, colors, and the video look

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Save your background video somewhere easy to find. You can use the link below or the video file that came with this package.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Let the AI build everything.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF. You do not edit code by hand unless you want to.

YOUR BACKGROUND VIDEO LINK

<https://www.ClickMotion.dev/assets/videos/sequence-01.mp4>

Offline file name if you were given a file: sequence-01.mp4. A still image may be included next to your video file for a clean first frame.

Your background video

This is the film that plays behind the Meridian design. Keep this link. It is also written inside every AI prompt below so your AI can attach it automatically.

VIDEO URL

<https://www.ClickMotion.dev/assets/videos/sequence-01.mp4>

File name: sequence-01.mp4

What the film shows: luxury beachfront homes at sunset, then a warm interior staircase, then a garden path to the ocean. About 12 seconds, no sound.

Prefer the URL when online. If you were given a local download, tell your AI: "Use my local file sequence-01.mp4 as the full-screen background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium full-viewport website hero for a luxury private residences brand called Meridian.

BACKGROUND VIDEO (required):

Use this video as the full-screen background film (not a small thumbnail):

<https://www.ClickMotion.dev/assets/videos/sequence-01.mp4>

If the user has a local file named sequence-01.mp4, use that file path in the project instead of downloading.

The video must be silent. Do not autoplay as a looping wallpaper. VIRTUAL PROGRESS controls which moment of the video is shown (scroll scrub). When the visitor scrolls the journey forward, the video advances. When they scroll back, it goes backward.

LOOK AND FEEL:

Dark cinematic frame color #0c0a08. Cream text #f7f1e8. One gold accent #c9a66b.

Elegant editorial serif for big headlines (Cormorant Garamond or Playfair Display). Clean sans (Inter) for smaller UI text.

Quiet, expensive, unhurried. Think private residences marketing, not a flashy tech startup.

Never use purple SaaS gradients, glass pill navigation bars, mesh/aurora backgrounds, shiny rainbow text, or emoji.

LAYOUT AND MOTION LAW (PIN-UNTIL-COMPLETE - mandatory - do NOT build a tall multi-vh page scroll track):

One pinned full-viewport stage (100dvh). Wheel / trackpad / touch / arrow keys advance VIRTUAL journey progress from 0 to 1.

Virtual journey effort is exactly 3.2 viewports of wheel distance (gold Meridian pace - do not invent a longer or shorter track).

GSAP scrub lag 0.45 seconds on a progress proxy (same smooth feel as classic scrub 0.45) - lag only, not page height.

At progress 0 + scroll up, or progress 1 + scroll down, RELEASE so the page can continue (membership band below).

Optional capture helper: `window.__msScrollNarrative.setProgress(0..1)`.

Top: brand wordmark MERIDIAN, links Residences, Architecture, Locations, Concierge, and a rectangular outlined gold button "Request Access". Thin gold progress line under the nav that fills as progress advances.

Bottom-left story copy changes in three chapters:

Chapter 1 (start): eyebrow "Private Atlantic · By Appointment", title two lines "The coastline" / "belongs to few.", short body about rare oceanfront residences.

Chapter 2 (middle): eyebrow "Interiors · Bespoke", title "Every ascent" / "is intentional.", body about stone, mahogany, warm interiors.

Chapter 3 (end): eyebrow "The Arrival", title "Where the day" / "ends in gold.", body about path to the shore, plus two buttons "Schedule a private tour" and "View the portfolio".

Right side on large screens: chapter markers 01 02 03 with the active one highlighted in gold.

At the very start only, a small "Scroll" cue with a thin gold line. Do not add instructional paragraphs about how scrolling works.

After the pin releases, a dark closing section: gold "Membership" label, headline "Reserved for those who already have everything.", short support copy, stats "12 Residences · 4 Coastlines · 100% Owners only", and outlined gold button "Begin a conversation" (email link is fine).

TECHNICAL (you the AI implement this, the human may not be a developer):

Use a modern web stack that works in the tool I am using. Prefer one main page component (or pack source/MeridianScrollNarrative.tsx).

Map virtual progress to `video.currentTime` with GSAP lag 0.45 if available, or a 0.45s lerp. Video attributes: muted, playsInline, preload

ready, no autoplay loop. Pause the video and only seek with progress. Support reduced-motion: show a still frame and chapter 1 only.

Keep text readable with dark gradients over the video. Safe side padding so text never touches the screen edges. NEVER use a tall sticky multi-vh document track as the method.

QUALITY BAR:

It should look like a Forbes or private bank lifestyle page, not a generic AI template. One clear system: pin-until-complete virtual progress owns the film at Meridian gold pace (3.2 viewports, lag 0.45).

When done: I should see the full Meridian experience with the background video linked above and every layout requirement above. If

Cursor prompt (continued)

something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

Build a premium full-viewport website hero for a luxury private residences brand called Meridian.

Bottom-left story copy changes in three chapters:

Chapter 1 (start): eyebrow "Private Atlantic · By Appointment", title two lines "The coastline" / "belongs to few.", short body about rare oceanfront residences.

Chapter 2 (middle): eyebrow "Interiors · Bespoke", title "Every ascent" / "is intentional.", body about stone, mahogany, warm interiors.

Chapter 3 (end): eyebrow "The Arrival", title "Where the day" / "ends in gold.", body about path to the shore, plus two buttons "Schedule a private tour" and "View the portfolio".

Right side on large screens: chapter markers 01 02 03 with the active one highlighted in gold.

At the very start only, a small "Scroll" cue with a thin gold line. Do not add instructional paragraphs about how scrolling works.

After the pin releases, a dark closing section: gold "Membership" label, headline "Reserved for those who already have everything.", short support copy, stats "12 Residences · 4 Coastlines · 100% Owners only", and outlined gold button "Begin a conversation" (email link is fine).

TECHNICAL (you the AI implement this, the human may not be a developer):

Use a modern web stack that works in the tool I am using. Prefer one main page component (or pack source/MeridianScrollNarrative.tsx).

Map virtual progress to `video.currentTime` with GSAP lag 0.45 if available, or a 0.45s lerp. Video attributes: muted, playsInline, preload ready, no autoplay loop. Pause the video and only seek with progress. Support reduced-motion: show a still frame and chapter 1 only.

Keep text readable with dark gradients over the video. Safe side padding so text never touches the screen edges. NEVER use a tall sticky multi-vh document track as the method.

QUALITY BAR:

It should look like a Forbes or private bank lifestyle page, not a generic AI template. One clear system: pin-until-complete virtual progress owns the film at Meridian gold pace (3.2 viewports, lag 0.45).

Your Smart AI Agent prompt (continued)

When done: I should see the full Meridian experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the brand name

Ask your AI: "Change the brand name MERIDIAN to [YOUR BRAND NAME] everywhere in the design, including the top corner. Keep pin-until-complete virtual progress."

Change the big headline

Ask your AI: "Change the first big headline to [LINE 1] on the first line and [LINE 2] on the second line. Keep the same elegant style."

Change the small gold label above the headline

Ask your AI: "Change the gold eyebrow text to [YOUR SHORT LABEL]."

Change button labels

Ask your AI: "Rename the button Request Access to [YOUR BUTTON TEXT]. Rename Schedule a private tour to [OTHER BUTTON TEXT]."

Change colors

Ask your AI: "Keep the luxury dark look, but change the gold accent from #c9a66b to [YOUR HEX COLOR], and keep text easy to read."

Use a different background video

Ask your AI: "Replace the background video with this file or URL: [YOUR VIDEO LINK OR FILE NAME]. Keep pin-until-complete virtual progress controlling the video, silent, no wallpaper loop. Keep effort 3.2 viewports and scrub lag 0.45."

Make it work on phones

Ask your AI: "Improve the mobile layout so text never clips, buttons are easy to tap, and the pin-until-complete experience still feels premium on a phone."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep the Meridian luxury style, pin-until-complete virtual progress (3.2 viewports, lag 0.45). Do not build a tall multi-vh scroll track. Do not ask me to write code."

New background video (optional)

Only if you want a different film. Open a video generation AI, paste the prompt below, generate a silent clip about 12 seconds long, then ask your coding AI to use your new file as the background.

COPY THIS INTO A VIDEO AI

Cinematic 4K continuous single-take feel, about 12 seconds, no audio, 24 frames per second. One journey: (1) slow aerial over Mediterranean-revival beachfront mansions at golden hour sunset, Atlantic waves, warm orange sky; (2) dissolve into ascending limestone staircase with dark mahogany banisters, recessed step lights, warm interior glow toward bright ocean windows; (3) emerge onto manicured lawn path between palms and hedges leading to beach gates and open sunset ocean horizon. Ultra luxury real estate atmosphere, natural light only, no people faces, no text, no UI, no logos. Smooth camera, expensive restraint. Seamless emotional arc.

Then tell your coding AI

Ask your AI: "Use my new video file [FILE NAME OR LINK] as the full-screen background. Keep the same Meridian layout and behavior."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
