

YOUR PRODUCT PACKAGE

Mirage

Agency Desert Scroll Glass Hero

An advertising-agency homepage hero where morphic liquid-glass story cards pivot on scroll over free-playing desert film - ready for your AI coding tool.

WHAT IS INSIDE

- Your background video link (and how to use the file)
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to customize text, colors, and the video look

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Save your background video somewhere easy to find. You can use the link below or the video file that came with this package.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Let the AI build everything.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF. You do not edit code by hand unless you want to.

YOUR BACKGROUND VIDEO LINK

<https://www.ClickMotion.dev/assets/videos/mirage-desert-v1.mp4>

Offline file name if you were given a file: mirage-desert-v1.mp4. A still image may be included next to your video file for a clean first frame.

Your background video

This is the film that plays behind the Mirage design. Keep this link. It is also written inside every AI prompt below so your AI can attach it automatically.

VIDEO URL

<https://www.ClickMotion.dev/assets/videos/mirage-desert-v1.mp4>

File name: mirage-desert-v1.mp4

What the film shows: cinematic desert survivor figure with cybernetic blue markings, dunes and heat haze, subject held on the right. Silent loop. It free-plays under the glass. Scroll aims the cards only. The film does not rewind.

Prefer the URL when online. If you were given a local download, tell your AI: "Use my local file mirage-desert-v1.mp4 as the full-screen background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium full-viewport advertising-agency website HERO for a brand called MIRAGE.

Prefer the files in the pack. Integrate source/MirageAgencyHero.tsx. Copy assets/mirage-desert-v1.mp4 to public/assets/videos/mirage-desert-v1.mp4.

BACKGROUND VIDEO (required - FREE-PLAYING LOOP, not scroll scrub, not PSAVE):

Use this video as the full-screen background film:

<https://www.ClickMotion.dev/assets/videos/mirage-desert-v1.mp4>

If the pack has a local file named mirage-desert-v1.mp4, use that path instead of downloading.

The video is silent. It plays freely with autoPlay muted loop playsInline. Subject (desert figure) holds on the RIGHT (object-position about 72% center). Soft left scrim so type stays readable. Do NOT map scroll to video.currentTime. Do NOT reverse the film. Scroll drives the FIVE LEFT-RAIL GLASS CARDS only.

NO SCROLLER (pin-until-complete) (non-negotiable):

One pinned 100dvh stage #mirage-hero in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky. Do not build a 5 x 1.55 vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_EARN = max(2.4, sheets x 1.55) viewports (7.75 at five sheets). Wheel / trackpad / touch / keys add deltaPx / (earn * window.innerHeight) to progress g (0 to 1). Cards follow g 1:1 (old useScroll feel). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks

(getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling never drives the cards. If stage.top >= -2, page-owns clears and the pin may take the wheel again.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. NOT Framer useScroll on a tall spacer. Do NOT install gsap. Do NOT install lenis.

LOOK AND FEEL - MORPHIC DARK LIQUID GLASS (M.A.C. / Triada stack):

Dark cinematic desert film. Minimal TEXT-ONLY top nav (no pill bar, no frosted toolbar). Brand MIRAGE left. Links: Work, Method, Clients, Culture, Contact.

Left rail: kicker, two-line large headline, stacked morphic glass cards, centered progress footer.

Right: pure film / subject space (keep face clear).

Display: geometric modern (Syne or similar). Body: clean sans (DM Sans / system).

Accents: soft gold #FDE68A, cool cyan #7DD3FC on near-white type.

Never white frosted glass. Never opaque black cards. Never Motionsites pill dock.

MORPHIC LIQUID GLASS (mandatory - three-layer stack, content NEVER on the blur node):

Shell (radius ~22px, rim, depth shadow)

-> glass layers (absolute, pointer-events none)

-> fill: background rgba(28, 30, 42, 0.38) + backdrop-filter blur(36px) saturate(190%)

-> specular: top-edge catch only (inset highlight + diagonal white gradient fading out, NOT a full white wash)

-> body (relative, z-index above glass): all readable content

Nested chips: light rgba white 0.08 fill + 0.5px border (glass-on-glass).

Do NOT kill glass with prefers-reduced-transparency on this product - Windows transparency-off was making solid dark slabs. Keep morphic fill. Reduced-motion is separate (static cards).

CARD MOTION (virtual progress, same rotateX maps as the original):

Five glass sheets stacked in a left deck (absolute stack - only active sheet face-on).

Each sheet local progress 0 to 1 maps rotateX from about +64 degrees through 0 (face-on) to -64 degrees.

Cursor prompt (continued)

Sheet 0 starts near face-on (from about 0.38) so the hero never opens empty.
 Mild Y travel (~26px), scale ~0.975 to 1, content opacity ramp.
 Progress bar + dots + active label + "Scroll to continue" centered under the cards.
 prefers-reduced-motion: static stacked cards, gradient fallback, no video chase.
 Capture helper: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-HERO-MIRA01" }. Root data-mirage-drive="pin". After release data-mirage-owns="page". While the pin owns data-mirage-owns="pin".

CONTENT:

Kicker: Advertising · Brand · Growth

Headline two lines exactly:

Creative that
survives the heat.

Five sheets:

01 Brand thesis - Find the idea that outlasts the feed. Metrics (40+, 3.2y, 94) + chips Positioning / Narrative / Identity system.

02 Creative systems - Campaigns built like products, not one-offs. Format lattice / craft bar / versioning rows + list.

03 Media craft - Put every dollar where attention is honest. Metrics waste/reach/payback + chips.

04 Always-on - A studio cadence, not a campaign panic. Sprint rows + client quote.

05 Growth proof - Outcomes the board can audit. Four metrics + chips Measurement / Incrementality / Board ready.

TECHNICAL:

React + TypeScript. Framer Motion useMotionValue / useTransform for card pivot. Virtual progress listeners (wheel non-passive, touch, keys). No GSAP. No ScrollTrigger. No Lenis. No PSAVE.

Video: muted, loop, autoPlay, playsInline, object-fit cover, object-position 72% center.

Single default-export component MirageAgencyHero. Props: sheets, brand, tagline, backgroundSrc, vhPerSheet.

Optional uniform zoom ~1.2 on the left rail composition for premium scale (keep proportions).

CUSTOMIZATION LAW:

Every visible string, every sheet, and the film itself must be easy to replace. After the default builds, the buyer will tell their AI to restage brand, headline, cards, accents, and film until the hero feels made for their brand alone.

QUALITY BAR:

Ultra-premium ad-agency hero. Morpheic dark glass over desert film. Free-playing subject on the right. Scroll only owns the cards. After the last card the page owns until dock. Not Folio mid-page section. Not Prism both-side constellation. Not white frosted SaaS. Never restore a tall sticky track. Never add PSAVE.

When done: I should see the full Mirage experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

One pinned 100dvh stage #mirage-hero in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky. Do not build a 5 x 1.55 vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_EARN = max(2.4, sheets x 1.55) viewports (7.75 at five sheets). Wheel / trackpad / touch / keys add deltaPx / (earn * window.innerHeight) to progress g (0 to 1). Cards follow g 1:1 (old useScroll feel). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks

(getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling never drives the cards. If stage.top >= -2, page-owns clears and the pin may take the wheel again.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. NOT Framer useScroll on a tall spacer. Do NOT install gsap. Do NOT install lenis.

LOOK AND FEEL - MORPHIC DARK LIQUID GLASS (M.A.C. / Triada stack):

Dark cinematic desert film. Minimal TEXT-ONLY top nav (no pill bar, no frosted toolbar). Brand MIRAGE left. Links: Work, Method, Clients, Culture, Contact.

Left rail: kicker, two-line large headline, stacked morphic glass cards, centered progress footer.

Right: pure film / subject space (keep face clear).

Display: geometric modern (Syne or similar). Body: clean sans (DM Sans / system).

Accents: soft gold #FDE68A, cool cyan #7DD3FC on near-white type.

Never white frosted glass. Never opaque black cards. Never Motionsites pill dock.

MORPHIC LIQUID GLASS (mandatory - three-layer stack, content NEVER on the blur node):

Shell (radius ~22px, rim, depth shadow)

-> glass layers (absolute, pointer-events none)

-> fill: background rgba(28, 30, 42, 0.38) + backdrop-filter blur(36px) saturate(190%)

-> specular: top-edge catch only (inset highlight + diagonal white gradient fading out, NOT a full white wash)

-> body (relative, z-index above glass): all readable content

Nested chips: light rgba white 0.08 fill + 0.5px border (glass-on-glass).

Do NOT kill glass with prefers-reduced-transparency on this product - Windows transparency-off was making solid dark slabs. Keep morphic fill. Reduced-motion is separate (static cards).

CARD MOTION (virtual progress, same rotateX maps as the original):

Five glass sheets stacked in a left deck (absolute stack - only active sheet face-on).

Codex / ChatGPT prompt (continued)

Each sheet local progress 0 to 1 maps rotateX from about +64 degrees through 0 (face-on) to -64 degrees.

Sheet 0 starts near face-on (from about 0.38) so the hero never opens empty.

Mild Y travel (~26px), scale ~0.975 to 1, content opacity ramp.

Progress bar + dots + active label + "Scroll to continue" centered under the cards.

prefers-reduced-motion: static stacked cards, gradient fallback, no video chase.

Capture helper: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-HERO-MIRA01" }. Root data-mirage-drive="pin". After release data-mirage-owns="page". While the pin owns data-mirage-owns="pin".

CONTENT:

Kicker: Advertising · Brand · Growth

Headline two lines exactly:

Creative that

survives the heat.

Five sheets:

01 Brand thesis - Find the idea that outlasts the feed. Metrics (40+, 3.2y, 94) + chips Positioning / Narrative / Identity system.

02 Creative systems - Campaigns built like products, not one-offs. Format lattice / craft bar / versioning rows + list.

03 Media craft - Put every dollar where attention is honest. Metrics waste/reach/payback + chips.

04 Always-on - A studio cadence, not a campaign panic. Sprint rows + client quote.

05 Growth proof - Outcomes the board can audit. Four metrics + chips Measurement / Incrementality / Board ready.

TECHNICAL:

React + TypeScript. Framer Motion useMotionValue / useTransform for card pivot. Virtual progress listeners (wheel non-passive, touch, keys). No GSAP. No ScrollTrigger. No Lenis. No PSAVE.

Video: muted, loop, autoPlay, playsInline, object-fit cover, object-position 72% center.

Single default-export component MirageAgencyHero. Props: sheets, brand, tagline, backgroundSrc, vhPerSheet.

Optional uniform zoom ~1.2 on the left rail composition for premium scale (keep proportions).

CUSTOMIZATION LAW:

Every visible string, every sheet, and the film itself must be easy to replace. After the default builds, the buyer will tell their AI to restage brand, headline, cards, accents, and film until the hero feels made for their brand alone.

QUALITY BAR:

Ultra-premium ad-agency hero. Morphic dark glass over desert film. Free-playing subject on the right. Scroll only owns the cards. After the last card the page owns until dock. Not Folio mid-page section. Not Prism both-side constellation. Not white frosted SaaS. Never restore a tall sticky track. Never add PSAVE.

When done: I should see the full Mirage experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Bolt

Select everything in the box area below (all parts if more than one page). Copy, then paste into Bolt. You do not need to understand the technical lines. Your AI does.

Build this as a complete page in Bolt. I am not a professional programmer. You handle all technical setup, libraries, and layout. Show me a working preview.

Build a premium full-viewport advertising-agency website HERO for a brand called MIRAGE.

Prefer the files in the pack. Integrate source/MirageAgencyHero.tsx. Copy assets/mirage-desert-v1.mp4 to public/assets/videos/mirage-desert-v1.mp4.

BACKGROUND VIDEO (required - FREE-PLAYING LOOP, not scroll scrub, not PSAVE):

Use this video as the full-screen background film:

<https://www.ClickMotion.dev/assets/videos/mirage-desert-v1.mp4>

If the pack has a local file named mirage-desert-v1.mp4, use that path instead of downloading.

The video is silent. It plays freely with autoPlay muted loop playsInline. Subject (desert figure) holds on the RIGHT (object-position about 72% center). Soft left scrim so type stays readable. Do NOT map scroll to video.currentTime. Do NOT reverse the film. Scroll drives the FIVE LEFT-RAIL GLASS CARDS only.

NO SCROLLER (pin-until-complete) (non-negotiable):

One pinned 100dvh stage #mirage-hero in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky. Do not build a 5 x 1.55 vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_EARN = max(2.4, sheets x 1.55) viewports (7.75 at five sheets). Wheel / trackpad / touch / keys add deltaPx / (earn * window.innerHeight) to progress g (0 to 1). Cards follow g 1:1 (old useScroll feel). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks

(getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling never drives the cards. If stage.top >= -2, page-owns clears and the pin may take the wheel again.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. NOT Framer useScroll on a tall spacer. Do NOT install gsap. Do NOT install lenis.

LOOK AND FEEL - MORPHIC DARK LIQUID GLASS (M.A.C. / Triada stack):

Dark cinematic desert film. Minimal TEXT-ONLY top nav (no pill bar, no frosted toolbar). Brand MIRAGE left. Links: Work, Method, Clients, Culture, Contact.

Left rail: kicker, two-line large headline, stacked morphic glass cards, centered progress footer.

Right: pure film / subject space (keep face clear).

Display: geometric modern (Syne or similar). Body: clean sans (DM Sans / system).

Accents: soft gold #FDE68A, cool cyan #7DD3FC on near-white type.

Never white frosted glass. Never opaque black cards. Never Motionsites pill dock.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the brand name

Ask your AI: "Change the brand name MIRAGE to [YOUR BRAND] everywhere, including the top left and any aria-label."

Change the headline

Ask your AI: "Change the two-line headline Creative that / survives the heat. to [LINE 1] / [LINE 2]. Keep exactly two lines. Keep nowrap on each line."

Rewrite the five cards

Ask your AI: "Rewrite all five glass cards for [YOUR AGENCY / BRAND]. Keep dense metrics, rows, chips, and the scroll pivot. Keep No Scroller and pin freeing. Do not add PSAVE."

Change accents

Ask your AI: "Keep dark morphic glass, but shift gold and cyan accents to [HEX A] and [HEX B]. Keep type readable."

Use a different background video

Ask your AI: "Replace the background video with [YOUR VIDEO LINK OR FILE]. Keep it muted, looping, free-playing. Do not scroll-scrub the video. Keep the subject on the right if possible."

Fix pin freeing

Ask your AI: "After the last card, scrolling down must release the pin. Then the PAGE owns the wheel until the hero docks at the top of the viewport again (stage.top >= 0). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling must never drive the cards. Do not restore a tall sticky track. Do not add PSAVE."

Change nav links

Ask your AI: "Replace Work Method Clients Culture Contact with [YOUR LINKS]. Keep minimal text-only nav."

Make it work on phones

Ask your AI: "Improve mobile so the headline stays two lines when possible, cards stay readable, and the subject film still feels premium. Keep No Scroller and pin freeing."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep Mirage as a morphic dark liquid-glass agency hero over free-playing desert film. Keep No Scroller (pin-until-complete) and pin freeing (page owns until dock). Do not restore a tall multi-vh sticky track. Do not add PSAVE. Do not scrub the film. Do not ask me to write code."

New background video (optional)

Only if you want a different film. Open a video generation AI, paste the prompt below, generate a silent clip about 12 seconds long, then ask your coding AI to use your new file as the background.

COPY THIS INTO A VIDEO AI

Cinematic 4K silent seamless loop, 12 to 20 seconds, 24fps. Desert heat, dunes, hooded figure with subtle futuristic face markings, cool cyan accents, warm sand. Subject on the right third. No logos, no UI text, no watermark. Premium ad-film atmosphere.

Then tell your coding AI

Ask your AI: "Use my new video file [FILE NAME OR LINK] as the full-screen background. Keep the same Mirage layout and behavior."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
