

YOUR PRODUCT PACKAGE

ZeroEnergy

3D Range Gallery Hero

A private tasting of your range: six vessels on one 3D stage you turn by hand, then a scroll that earns the proof. Restage every can until it could only be yours.

WHAT IS INSIDE

- Your 3D rebuild files (cans, labels, fonts) in the files zip
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to restage labels, copy, and colors

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Unzip the files zip next to your app. You should see START-HERE.md at the top level.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Tell it to use the source and assets in the zip.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change labels, wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF.

PRIMARY 3D FILE IN YOUR PACK

<https://www.ClickMotion.dev/assets/zero-energy/webgl/can.glb>

Offline file name: can.glb. Copy the whole assets/ folder to public/assets/zero-energy/. This is not a background film.

Your 3D rebuild files

This is not a background-film product. Rebuild ZeroEnergy from the files zip: meshes, labels, HDRI, fonts, and source. Never use a storefront recording as a hero film.

PRIMARY MESH IN THE PACK

<https://www.ClickMotion.dev/assets/zero-energy/webgl/can.glb>

File name: can.glb

Client media is the 3D range pack in the files zip (can mesh, six labels, HDRI, fonts). This is not a background-film product. Use the files zip, not a storefront recording.

Tell your AI: "Use the files zip. Copy assets/ to public/assets/zero-energy/ and keep can.glb as the can mesh. Do not add a background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium full-page website GALLERY for a beverage or physical product family called Zero Energy (buyer will rebrand).

This is a 3D RANGE GALLERY. The difference is the lineup. Six labeled vessels share one dark stage. Visitors grab the can they want and turn the whole range by hand. Scroll then opens flavor, four proof beats, a hard closer, the pack, and FAQ. One piece does hero and landing page.

CLIENT MEDIA (required - in the product files zip, not a background film):

Place pack assets under public/assets/zero-energy/ with the same folder names:

- webgl/can.glb, webgl/base.glb, webgl/hdri2.hdr
- textures/ six flavor label WebP files (source order must match data/flavors.ts)
- img/zero-energy_logo.webp (the italic Z cut is designed - do not redraw it)
- fonts/ Geist + Franklin Gothic ATF Black Italic woff2
- audio/ UI mp3s
- css/ gallery sheets

If the user has the files zip, copy assets/ onto public/assets/zero-energy/ and use source/ as written.

This product has no looping hero film. Do not invent a background video.

LOOK AND FEEL:

Pure black canvas #000. Geist for UI. Franklin Gothic ATF Black Italic for display. Local fonts only.

Six flavor color pairs drive lights, pager, and HUD.

Private tasting room x editorial beverage launch. Not SaaS glass. Not a photo slider. Not a single-can hero.

SIGNATURE A - 3D RANGE CAROUSEL:

Raw Three 0.161.0 (exact). No React Three Fiber. No drei. Do not bump Three.

Six cans. Spacing 3.5. Camera FOV 20. Grab + arrows + liquid pager stay in sync.

SIGNATURE B - PIN-UNTIL-COMPLETE CLOCK:

Lenis infinite true, autoRaf false. Lenis scroll seeks the GSAP timeline.

NOT ScrollTrigger.scrub. NOT a tall multi-vh sticky page.

The stage stays pinned. Wheel / trackpad / touch drive virtual progress.

When this is the whole site, Lenis owns the document.

When embedded in a longer page, pin until the closer chapter finishes, then release.

SIGNATURE C - STORY CHAPTERS (in this order):

- 1) 3D can carousel
- 2) Flavor profile for the active can
- 3) Four benefit beats
- 4) ZERO BULLSHIT mark
- 5) Packshot
- 6) Nine FAQ
- 7) Closer

Contact is an in-page jump to #FAQ. No outbound URLs. No emails.

MOTION:

Flavor HUD: SplitText line mask, stagger 0.08s, duration 0.7s, ease power3.out.

Benefits: same SplitText band, stagger 0.05-0.2s.

Cursor prompt (continued)

FAQ: height + opacity about 0.35s power2.out.
prefers-reduced-motion: settle on chapter 1, readable cans, no timeline thrash.

LAYOUT:

Full viewport immersive page. Nav: logo + Gamme / Benefices / FAQ.
Safe side padding so type never touches the edges. Touch targets at least 44px.
No site header/footer required inside the component.

TECHNICAL:

React + TypeScript. three@0.161.0 exact. lenis@^1.3.0. gsap@^3.13.0 + ScrollTrigger + real SplitText.
Prefer pack source: ZeroEnergyGallery.tsx, CanGallery.tsx, webgl-scene.js, hud-init.ts, flavors.ts, copy.ts.
Isolate this Three from any host three@0.185 or R3F.
Dispose WebGL, composer, textures, and animation frame on unmount.

CUSTOMIZATION LAW:

Every visible string, the six labels, the logo, flavor tokens, mesh, and FAQ must be easy to replace.
After the default builds, the buyer will tell their AI to restage brand, labels, and copy until a stranger knows it is theirs.

QUALITY BAR:

It should feel like opening a private tasting of a range: one stage, a living lineup, a hand that chooses, then a scroll that earns the proof.
Not a template carousel. Not a single hero can. Not a tall sticky page.

When done: I should see the full ZeroEnergy 3D range gallery from the files zip (six cans on one pinned stage). Do not add a looping background film. If something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

Build a premium full-page website GALLERY for a beverage or physical product family called Zero Energy (buyer will rebrand).

This is a 3D RANGE GALLERY. The difference is the lineup. Six labeled vessels share one dark stage. Visitors grab the can they want and turn the whole range by hand. Scroll then opens flavor, four proof beats, a hard closer, the pack, and FAQ. One piece does hero and landing page.

Six cans. Spacing 3.5. Camera FOV 20. Grab + arrows + liquid pager stay in sync.

SIGNATURE B - PIN-UNTIL-COMPLETE CLOCK:

Lenis infinite true, autoRaf false. Lenis scroll seeks the GSAP timeline.

NOT ScrollTrigger.scrub. NOT a tall multi-vh sticky page.

The stage stays pinned. Wheel / trackpad / touch drive virtual progress.

When this is the whole site, Lenis owns the document.

When embedded in a longer page, pin until the closer chapter finishes, then release.

SIGNATURE C - STORY CHAPTERS (in this order):

- 1) 3D can carousel
- 2) Flavor profile for the active can
- 3) Four benefit beats
- 4) ZERO BULLSHIT mark
- 5) Packshot
- 6) Nine FAQ
- 7) Closer

Contact is an in-page jump to #FAQ. No outbound URLs. No emails.

MOTION:

Your Smart AI Agent prompt (continued)

Flavor HUD: SplitText line mask, stagger 0.08s, duration 0.7s, ease power3.out.
Benefits: same SplitText band, stagger 0.05-0.2s.
FAQ: height + opacity about 0.35s power2.out.
prefers-reduced-motion: settle on chapter 1, readable cans, no timeline thrash.

LAYOUT:

Full viewport immersive page. Nav: logo + Gamme / Benefices / FAQ.
Safe side padding so type never touches the edges. Touch targets at least 44px.
No site header/footer required inside the component.

TECHNICAL:

React + TypeScript. three@0.161.0 exact. lenis@^1.3.0. gsap@^3.13.0 + ScrollTrigger + real SplitText.
Prefer pack source: ZeroEnergyGallery.tsx, CanGallery.tsx, webgl-scene.js, hud-init.ts, flavors.ts, copy.ts.
Isolate this Three from any host three@0.185 or R3F.
Dispose WebGL, composer, textures, and animation frame on unmount.

CUSTOMIZATION LAW:

Every visible string, the six labels, the logo, flavor tokens, mesh, and FAQ must be easy to replace.
After the default builds, the buyer will tell their AI to restage brand, labels, and copy until a stranger knows it is theirs.

QUALITY BAR:

It should feel like opening a private tasting of a range: one stage, a living lineup, a hand that chooses, then a scroll that earns the proof.
Not a template carousel. Not a single hero can. Not a tall sticky page.

When done: I should see the full ZeroEnergy 3D range gallery from the files zip (six cans on one pinned stage). Do not add a looping background film. If something is missing, fix it without asking me for code knowledge.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Replace the six labels

Ask your AI: "Replace the six can labels with my product art under `public/assets/zero-energy/textures/`. Update `canLabels` in `webgl-scene.js`. Keep six items in the same order as `data/flavors.ts`."

Rename the flavors

Ask your AI: "Replace `FLAVORS` in `data/flavors.ts` with my six products (id, two-line title, desc, primary hex, secondary hex). Rewrite every Zero Energy sentence into my brand voice."

Swap the logo

Ask your AI: "Replace `zero-energy_logo.webp` with my logo. Keep the navbar lockup. Do not redraw letter geometry unless I ask. Update the aria-label to my brand name."

Rewrite proof and FAQ

Ask your AI: "Rewrite `BENEFITS`, `FAQ`, and `CLOSER` in `data/copy.ts` for `[MY BRAND]`. Keep four benefit beats and nine FAQ. Contact still jumps to `#FAQ`. No outbound links."

Change colors

Ask your AI: "Keep the black canvas. Change each flavor primary/secondary pair in `data/flavors.ts` to `[MY HEX PAIRS]`. Keep type readable on `#000`."

Use my own can mesh

Ask your AI: "Replace `webgl/can.glb` with my GLB. Keep UV layout compatible with the six labels, or remake the labels to match. Keep Three at 0.161.0."

Make it work on phones

Ask your AI: "Compress the HUD on small screens, keep 44px targets, touch-drag the carousel, and keep the stage pinned. No horizontal overflow at 320px."

Something looks wrong

Ask your AI: "Something is broken: `[DESCRIBE]`. Keep six cans on one 3D stage, Lenis seeking the timeline, pin-until-complete, Three 0.161.0, no React Three Fiber. Do not ask me to write code."

New labels or mesh (optional)

This product has no hero film. Only if you want new can art: generate six wrap maps, or supply your own GLB, then ask your coding AI to swap the files in the pack.

COPY THIS INTO A VIDEO AI

This product does not require a looping background film. If generating new can labels: six high-resolution wrap maps, same UV layout, no watermarks, no website chrome. Or replace the GLB and six labels with the buyer's product family.

Then tell your coding AI

Ask your AI: "Replace the six labels or can.glb with [MY FILES]. Keep the same ZeroEnergy 3D range, Three 0.161.0, and Lenis clock. Do not add a background film."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
