

YOUR PRODUCT PACKAGE

Folio

Pin-Until-Complete Liquid Glass Decision Section

A mid-page enterprise section where five dense liquid-glass decision panels pivot on a pin-until-complete journey over motion film - mandate through outcomes, ready for your AI coding tool.

WHAT IS INSIDE

- Your background video link (and how to use the file)
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to customize text, colors, and the video look

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Save your background video somewhere easy to find. You can use the link below or the video file that came with this package.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Let the AI build everything.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF. You do not edit code by hand unless you want to.

YOUR BACKGROUND VIDEO LINK

<https://www.ClickMotion.dev/assets/videos/folio-blurry-v1.mp4>

Offline file name if you were given a file: folio-blurry-v1.mp4. A still image may be included next to your video file for a clean first frame.

Your background video

This is the film that plays behind the Folio design. Keep this link. It is also written inside every AI prompt below so your AI can attach it automatically.

VIDEO URL

<https://www.ClickMotion.dev/assets/videos/folio-blurry-v1.mp4>

File name: folio-blurry-v1.mp4

What the film shows: abstract blurred colorful motion vision loop - soft bokeh fields of light, no people, no UI, no logos. Silent seamless loop for glass refraction.

Prefer the URL when online. If you were given a local download, tell your AI: "Use my local file folio-blurry-v1.mp4 as the full-screen background video."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium mid-page website SECTION (not a full-bleed hero) for an enterprise growth brand called FOLIO.

BACKGROUND VIDEO (required - LOOP WALLPAPER under glass, not video scrub):

Use this video as the full-stage motion background:

<https://www.ClickMotion.dev/assets/videos/folio-blurry-v1.mp4>

If the user has a local file named folio-blurry-v1.mp4, use that path instead of downloading.

The video is silent. It loops with autoPlay muted playsInline. A soft dark veil sits over the film so type stays readable. Do NOT map scroll or progress to video.currentTime. Progress drives the GLASS PANELS only.

LOOK AND FEEL - DARK TRANSLUCENT ENTERPRISE GLASS:

One pinned full-viewport stage (100dvh). Display: Syne (or geometric modern). Body: DM Sans.

White type on dark translucent liquid glass. Soft iridescent rim (cyan / violet / rose). Cool accents.

Serious Linear / Stripe enterprise density. Board-ready copy. Not toy charts, not sparse white cards, not purple mesh.

LIQUID GLASS (mandatory - layered, not single blur dump):

1) Translucent fill rgba(255,255,255,0.08-0.18) + backdrop-filter blur ~26px saturate ~185% so the film shows through.

2) Iridescent edge wash (cyan / violet / rose) - edge catch only, not full-card white wash.

3) Specular top highlight + hairline porcelain rim + soft outer glow.

4) prefers-reduced-transparency: solid elevated dark slate cards, same layout.

MOTION LAW (PIN-UNTIL-COMPLETE - mandatory product law - do NOT build a tall multi-vh page scroll track):

One 100dvh stage. Wheel / trackpad / touch / arrow keys advance VIRTUAL journey progress from 0 to 1.

Virtual journey effort about sheets x 1.55 viewports of wheel distance (NOT document height, NOT a long page scrollbar).

Framer Motion: useMotionValue for journeyProgress + useTransform for sheet maps. Do NOT use document useScroll on a tall track.

Five large glass sheets stacked (hidden deck - only the active sheet is visible).

Each sheet: local progress 0 to 1 maps rotateX from about +72 degrees (edge from below) through 0 (face-on, readable) to -72 degrees (edge above).

Slight overlap between sheets (~18%) so handoffs feel continuous. Long face-on plateau. Soft opacity ramps. Mild Y travel (~36px). Last sheet holds face longer then exits.

At progress 0 + user scrolling up, or progress 1 + user scrolling down, RELEASE so the host page can continue (client embed).

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks

(getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling never drives the cards.

Progress bar + step dots under the deck. Capture API: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-SEC-FOLI01" }. Root data-folio-drive="pin".

prefers-reduced-motion: static stacked glass cards, gradient fallback, no video.

CONTENT (five dense decision sheets - board-ready, not marketing fluff):

01 Mandate - Align the enterprise on a single growth thesis. Metrics (ARR, TAM, markets, sponsors) + north star / constraint / non-goal rows + chips.

02 Insight - Buyers who convert. Split columns of ICP stats + evidence bullet list.

03 System - Operating system rows (narrative spine, offer ladder, proof library, channel rules, handoff SLA) + chips.

04 Execution - 90-day phases metrics + workstream rows + kill criteria.

05 Outcomes - Board KPIs (pipeline, CAC payback, win rate, NRR) + executive quote + chips.

HEADER above deck:

Cursor prompt (continued)

Kicker: Enterprise growth system

Heading: Five decisions that turn strategy into revenue.

TECHNICAL:

React + TypeScript. Framer Motion useMotionValue + useTransform mandatory for pin journey (NOT useScroll on a tall track).

Video: muted, loop, autoPlay, playsInline, object-fit cover.

Single default-export component FolioPivotSection. Configurable sheets, kicker, heading, vhPerSheet (virtual effort), backgroundSrc.

Prefer pack source/FolioPivotSection.tsx when the buyer has the files pack.

No forced page intro or outro inside the component - section only.

QUALITY BAR:

It should feel like a board presentation in liquid glass over motion film - dense, serious, premium. Not a white empty card on a white page.

Not Prism multi-panel hero. Not Meridian coastal estate. Not a long traditional scrolling page.

When done: I should see the full Folio experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

Build a premium mid-page website SECTION (not a full-bleed hero) for an enterprise growth brand called FOLIO.

BACKGROUND VIDEO (required - LOOP WALLPAPER under glass, not video scrub):

Use this video as the full-stage motion background:

<https://www.ClickMotion.dev/assets/videos/folio-blurry-v1.mp4>

If the user has a local file named folio-blurry-v1.mp4, use that path instead of downloading.

The video is silent. It loops with autoPlay muted playsInline. A soft dark veil sits over the film so type stays readable. Do NOT map scroll or progress to video.currentTime. Progress drives the GLASS PANELS only.

It should feel like a board presentation in liquid glass over motion film - dense, serious, premium. Not a white empty card on a white page.

Not Prism multi-panel hero. Not Meridian coastal estate. Not a long traditional scrolling page.

When done: I should see the full Folio experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Copy this into Your Smart AI Agent

Select everything in the box area below (all parts if more than one page). Copy, then paste into Your Smart AI Agent. You do not need to understand the technical lines. Your AI does.

You are my smart AI agent. I may not be a professional programmer. Build a complete, production-ready website hero from the brief below. You choose the stack that works in my environment, create every file, wire the background video, and deliver a polished preview. Do not leave steps for me that require writing code. When finished, explain in plain English how I view and share the result.

Build a premium mid-page website SECTION (not a full-bleed hero) for an enterprise growth brand called FOLIO.

BACKGROUND VIDEO (required - LOOP WALLPAPER under glass, not video scrub):

Use this video as the full-stage motion background:

<https://www.ClickMotion.dev/assets/videos/folio-blurry-v1.mp4>

If the user has a local file named folio-blurry-v1.mp4, use that path instead of downloading.

The video is silent. It loops with autoPlay muted playsInline. A soft dark veil sits over the film so type stays readable. Do NOT map scroll or progress to video.currentTime. Progress drives the GLASS PANELS only.

LOOK AND FEEL - DARK TRANSLUCENT ENTERPRISE GLASS:

One pinned full-viewport stage (100dvh). Display: Syne (or geometric modern). Body: DM Sans.

White type on dark translucent liquid glass. Soft iridescent rim (cyan / violet / rose). Cool accents.

Serious Linear / Stripe enterprise density. Board-ready copy. Not toy charts, not sparse white cards, not purple mesh.

LIQUID GLASS (mandatory - layered, not single blur dump):

1) Translucent fill rgba(255,255,255,0.08-0.18) + backdrop-filter blur ~26px saturate ~185% so the film shows through.

2) Iridescent edge wash (cyan / violet / rose) - edge catch only, not full-card white wash.

3) Specular top highlight + hairline porcelain rim + soft outer glow.

4) prefers-reduced-transparency: solid elevated dark slate cards, same layout.

MOTION LAW (PIN-UNTIL-COMPLETE - mandatory product law - do NOT build a tall multi-vh page scroll track):

One 100dvh stage. Wheel / trackpad / touch / arrow keys advance VIRTUAL journey progress from 0 to 1.

Virtual journey effort about sheets x 1.55 viewports of wheel distance (NOT document height, NOT a long page scrollbar).

Framer Motion: useMotionValue for journeyProgress + useTransform for sheet maps. Do NOT use document useScroll on a tall track.

Five large glass sheets stacked (hidden deck - only the active sheet is visible).

Each sheet: local progress 0 to 1 maps rotateX from about +72 degrees (edge from below) through 0 (face-on, readable) to -72 degrees (edge above).

Slight overlap between sheets (~18%) so handoffs feel continuous. Long face-on plateau. Soft opacity ramps. Mild Y travel (~36px). Last sheet holds face longer then exits.

At progress 0 + user scrolling up, or progress 1 + user scrolling down, RELEASE so the host page can continue (client embed).

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks

(getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the cards. Pointer on the next sibling never drives the cards.

Progress bar + step dots under the deck. Capture API: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-SEC-FOLI01" }. Root data-folio-drive="pin".

prefers-reduced-motion: static stacked glass cards, gradient fallback, no video.

CONTENT (five dense decision sheets - board-ready, not marketing fluff):

01 Mandate - Align the enterprise on a single growth thesis. Metrics (ARR, TAM, markets, sponsors) + north star / constraint / non-goal rows + chips.

02 Insight - Buyers who convert. Split columns of ICP stats + evidence bullet list.

03 System - Operating system rows (narrative spine, offer ladder, proof library, channel rules, handoff SLA) + chips.

04 Execution - 90-day phases metrics + workstream rows + kill criteria.

05 Outcomes - Board KPIs (pipeline, CAC payback, win rate, NRR) + executive quote + chips.

Your Smart AI Agent prompt (continued)

HEADER above deck:

Kicker: Enterprise growth system

Heading: Five decisions that turn strategy into revenue.

TECHNICAL:

React + TypeScript. Framer Motion useMotionValue + useTransform mandatory for pin journey (NOT useScroll on a tall track).

Video: muted, loop, autoPlay, playsInline, object-fit cover.

Single default-export component FolioPivotSection. Configurable sheets, kicker, heading, vhPerSheet (virtual effort), backgroundSrc.

Prefer pack source/FolioPivotSection.tsx when the buyer has the files pack.

No forced page intro or outro inside the component - section only.

QUALITY BAR:

It should feel like a board presentation in liquid glass over motion film - dense, serious, premium. Not a white empty card on a white page.

Not Prism multi-panel hero. Not Meridian coastal estate. Not a long traditional scrolling page.

When done: I should see the full Folio experience with the background video linked above and every layout requirement above. If something is missing, fix it without asking me for code knowledge.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the kicker and heading

Ask your AI: "Change the kicker Enterprise growth system to [YOUR KICKER] and the heading to [YOUR HEADING]."

Rewrite the five sheets

Ask your AI: "Rewrite all five decision sheets for [YOUR BUSINESS]. Keep dense metrics, rows, and chips. Keep five sheets and pin-until-complete virtual progress."

Change brand language

Ask your AI: "Replace enterprise growth language with [YOUR INDUSTRY] language. Keep board-ready density."

Change glass color temperature

Ask your AI: "Keep dark translucent glass, but shift iridescent edges to [YOUR ACCENT HEXES]. Keep white type readable."

Use a different background video

Ask your AI: "Replace the background video with [YOUR VIDEO LINK OR FILE]. Keep it muted, looping, under the glass. Do not scroll-scrub the video."

Add or remove a sheet

Ask your AI: "Change to [N] sheets with the same pivot motion and dense content blocks."

Make it work on phones

Ask your AI: "Improve mobile so metrics wrap to two columns, content stays readable, and the pivot still feels premium."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep Folio dark liquid glass enterprise style. Do not ask me to write code."

New background video (optional)

Only if you want a different film. Open a video generation AI, paste the prompt below, generate a silent clip about 12 seconds long, then ask your coding AI to use your new file as the background.

COPY THIS INTO A VIDEO AI

Cinematic 4K silent seamless loop, 10 to 20 seconds, 24fps. Abstract soft-focus blurry vision motion background - organic color fields, gentle light shifts, no people, no text, no UI, no logos. Premium ambient atmosphere for liquid glass UI over film.

Then tell your coding AI

Ask your AI: "Use my new video file [FILE NAME OR LINK] as the full-screen background. Keep the same Folio layout and behavior."

You are ready

- Your video link is on the video page of this package and inside every tool prompt.
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
