

YOUR PRODUCT PACKAGE

Helix

Helical Design Gallery Carousel Section

A spatial mid-page gallery where your work rides a 3D helix as titles cross the stage. Fully customizable cards, copy, and color so it feels made for your brand.

WHAT IS INSIDE

- Nine gallery stills plus React source in the files zip
- A ready prompt for Cursor, Claude, Grok Build, Lovable, Codex, Bolt or any smart AI
- Simple ways to ask your AI to restage brand, titles, cards, and colors

You do not need to know how to program. Your AI does the technical work.

www.ClickMotion.dev

Start here (about 10 minutes)

Follow these steps in order. If you get stuck, paste the error message into the same AI and ask it to fix the project for you.

Step 1

Unzip the files zip next to your app. You should see START-HERE.md at the top level.

Step 2

Open the AI tool you already use.

Step 3

Find that tool's section in this PDF (or "Your Smart AI Agent" if your tool is not listed by name). Select the whole prompt under "Copy this into [tool]". Copy it.

Step 4

Paste it into a new chat or project in that tool and run it. Tell it to use the source and assets in the zip.

Step 5

When the preview looks absolutely stunning, ask your AI: "Explain in plain language how I open and share this site."

Step 6

To change labels, wording, colors, or branding, use the "Ask your AI to change..." lines later in this PDF.

FIRST GALLERY STILL (REPLACE ALL NINE)

<https://www.ClickMotion.dev/assets/images/orbit/orbit-01.jpg>

Offline files: orbit-01.jpg through orbit-09.jpg. Copy assets/ to public/assets/images/orbit/. This is not a background film.

Your gallery stills

This is not a background-film product. Rebuild Helix from the files zip: nine stills plus HelixGallerySection and OrbitHelix. Never use a storefront recording as a hero film.

FIRST STILL IN THE PACK

<https://www.ClickMotion.dev/assets/images/orbit/orbit-01.jpg>

File name: orbit-01.jpg

Client media is nine gallery stills on a helical carousel (swap every card for your work). There is no background film and no reverse-played video. Scroll aims the helix. The page stays still until the viewing ends, then the pin releases. After release the page owns until the stage docks.

Tell your AI: "Use the files zip. Copy assets/orbit-01.jpg through orbit-09.jpg to public/assets/images/orbit/. Prefer source/HelixGallerySection.tsx. Keep No Scroller and pin freeing (page owns until dock). Do not add a background video. Do not install gsap or lenis."

Copy this into Cursor

Select everything in the box area below (all parts if more than one page). Copy, then paste into Cursor. You do not need to understand the technical lines. Your AI does.

You are building production UI in my coding editor (Cursor). Create the files I need and keep the solution clean and complete.

Build a premium mid-page website SECTION (not a full-bleed hero) for a design-studio gallery brand called HELIX.

This is a SPATIAL GALLERY CAROUSEL. Solid stage color (#C3C3C3 by default, fully recolorable) with a WebGL cylindrical card helix. Cards are the focus so the buyer can load their own work. Do not force a loud underlay film unless the buyer asks for a soft stage treatment.

Prefer the files in the pack. Integrate source/HelixGallerySection.tsx and source/OrbitHelix.tsx. Copy assets/orbit-01.jpg through orbit-09.jpg to public/assets/images/orbit/.

NO SCROLLER (pin-until-complete) (non-negotiable):

One pinned 100dvh stage in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky.

Do not build a 3vh / 5vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_VIEWPORTS = 5 on desktop, 3 when window.innerWidth < 768. Wheel / trackpad / touch / keys add deltaPx / (viewports * window.innerHeight) to progress g (0 to 1). Titles and helix follow g 1:1 (old scrub:true). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks (getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the helix. Pointer on the next sibling never drives the helix.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. There is no reverse-played film. Do NOT install gsap. Do NOT install lenis.

GALLERY STILLs (required - nine images on the helix - replace with buyer work):

Default demo textures (load order reverse: 09 down to 01):

<https://www.ClickMotion.dev/assets/images/orbit/orbit-01.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-02.jpg>,

<https://www.ClickMotion.dev/assets/images/orbit/orbit-03.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-04.jpg>,

<https://www.ClickMotion.dev/assets/images/orbit/orbit-05.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-06.jpg>,

<https://www.ClickMotion.dev/assets/images/orbit/orbit-07.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-08.jpg>,

<https://www.ClickMotion.dev/assets/images/orbit/orbit-09.jpg>

If the pack has local files named orbit-01.jpg through orbit-09.jpg, place those at public/assets/images/orbit/ and use those paths.

Each card is a rounded rectangle on a helical ribbon (radius about 12, two full turns, spacing about 6.2). Thin gray guide rails along the path.

The buyer will swap every card for their portfolio, UI frames, campaigns, or product boards. Prefer portrait-ish high-resolution stills without watermarks.

LOOK AND FEEL - EDITORIAL GALLERY (not SaaS glass):

Stage #C3C3C3. Ink #0a0a0a / #1a1a1a. Quiet Swiss board. Private design studio.

Display: geometric sans (Neue Haas / Inter / Helvetica Neue). Wordmark: Birthstone script for demo brand ClickMotion (buyer will rebrand).

Never purple mesh, never Motionsites pill docks, never a required third-party Dribbble button.

SIGNATURE A - CROSSING TITLES:

Giant uppercase "Design in" starts off the left and travels right.

Giant uppercase "motion" starts off the right and travels left.

They peak near center at g about 0.18, then continue out of frame as the journey finishes.

Backface-hidden for clean motion. Both strings are buyer-editable.

SIGNATURE B - CENTER LOCKUP:

Cursor prompt (continued)

Above a quiet uppercase line "Exploring ideas through / daily design practice." place the brand wordmark in Birthstone (default ClickMotion). Fade the lockup after g about 0.55. All of these strings are buyer-editable.

SIGNATURE C - WEBGL HELIX:

React Three Fiber Canvas full viewport, transparent clear, high-performance. Cards ease in from off-path as progress advances (do not seed mid-arc on first paint). Force the canvas to the viewport size (never stuck at 300x150).

LAYOUT:

Section only - no forced page header/footer.

Pin stage 100dvh solid stage color. Virtual earn 5 viewport heights on desktop, 3 on mobile (not page height).

Stack: titles + concepts under the canvas; concepts bottom-left three lines (buyer-editable).

Do not add a pin-spacer. The section background is the stage.

TECHNICAL:

React + TypeScript. Virtual progress listeners (wheel non-passive, touch, keys). No GSAP. No ScrollTrigger. No Lenis.

three + @react-three/fiber for helix. Birthstone from Google Fonts for wordmark (or buyer brand font).

prefers-reduced-motion: static mid pose at g 0.45, titles near center, no chase.

Capture helper: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-SEC-HELI01" }. Root data-helix-drive="pin". After release: data-helix-owns="page".

Single default-export component HelixGallerySection plus OrbitHelix. Do not add SmoothScroll or gsap-register.

CUSTOMIZATION LAW:

Every visible string and every card image must be easy to replace. After the default builds, the buyer will tell their AI to restage brand, titles, center lines, concepts copy, nine cards, and stage color until the section feels made for their brand alone.

QUALITY BAR:

It should feel like a private viewing of craft work on a calm board - spatial, intentional, complete. One clear system: No Scroller. Scroll aims the helix. The page stays still until the viewing ends. Never restore gsap. Never add PSAVE.

When done: I should see the full Helix spatial gallery from the files zip (nine cards on a helix, crossing titles, page still during the viewing, then the page owns until dock). Do not add a looping background film. Do not install gsap or lenis. If something is missing, fix it without asking me for code knowledge.

Copy this into Claude

Select everything in the box area below (all parts if more than one page). Copy, then paste into Claude. You do not need to understand the technical lines. Your AI does.

You are my coding assistant. Build a complete, production-ready solution I can use. Explain briefly what you created after you finish, in plain language.

Build a premium mid-page website SECTION (not a full-bleed hero) for a design-studio gallery brand called HELIX.

This is a SPATIAL GALLERY CAROUSEL. Solid stage color (#C3C3C3 by default, fully recolorable) with a WebGL cylindrical card helix. Cards are the focus so the buyer can load their own work. Do not force a loud underlay film unless the buyer asks for a soft stage treatment.

Prefer the files in the pack. Integrate source/HelixGallerySection.tsx and source/OrbitHelix.tsx. Copy assets/orbit-01.jpg through orbit-09.jpg to public/assets/images/orbit/.

NO SCROLLER (pin-until-complete) (non-negotiable):

One pinned 100dvh stage in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky. Do not build a 3vh / 5vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_VIEWPORTS = 5 on desktop, 3 when window.innerWidth < 768. Wheel / trackpad / touch / keys add deltaPx / (viewports * window.innerHeight) to progress g (0 to 1). Titles and helix follow g 1:1 (old scrub:true). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks (getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the helix. Pointer on the next sibling never drives the helix.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. There is no reverse-played film. Do NOT install gsap. Do NOT install lenis.

GALLERY STILLs (required - nine images on the helix - replace with buyer work):

Default demo textures (load order reverse: 09 down to 01):

<https://www.ClickMotion.dev/assets/images/orbit/orbit-09.jpg>

If the pack has local files named orbit-01.jpg through orbit-09.jpg, place those at public/assets/images/orbit/ and use those paths.

Each card is a rounded rectangle on a helical ribbon (radius about 12, two full turns, spacing about 6.2). Thin gray guide rails along the path.

The buyer will swap every card for their portfolio, UI frames, campaigns, or product boards. Prefer portrait-ish high-resolution stills without watermarks.

LOOK AND FEEL - EDITORIAL GALLERY (not SaaS glass):

Stage #C3C3C3. Ink #0a0a0a / #1a1a1a. Quiet Swiss board. Private design studio.

Display: geometric sans (Neue Haas / Inter / Helvetica Neue). Wordmark: Birthstone script for demo brand ClickMotion (buyer will rebrand).

Never purple mesh, never Motionsites pill docks, never a required third-party Dribbble button.

SIGNATURE A - CROSSING TITLES:

Giant uppercase "Design in" starts off the left and travels right.

Giant uppercase "motion" starts off the right and travels left.

They peak near center at g about 0.18, then continue out of frame as the journey finishes.

Backface-hidden for clean motion. Both strings are buyer-editable.

Codex / ChatGPT prompt (continued)

SIGNATURE B - CENTER LOCKUP:

Above a quiet uppercase line "Exploring ideas through / daily design practice." place the brand wordmark in Birthstone (default ClickMotion). Fade the lockup after g about 0.55. All of these strings are buyer-editable.

SIGNATURE C - WEBGL HELIX:

React Three Fiber Canvas full viewport, transparent clear, high-performance. Cards ease in from off-path as progress advances (do not seed mid-arc on first paint). Force the canvas to the viewport size (never stuck at 300x150).

LAYOUT:

Section only - no forced page header/footer.

Pin stage 100dvh solid stage color. Virtual earn 5 viewport heights on desktop, 3 on mobile (not page height).

Stack: titles + concepts under the canvas; concepts bottom-left three lines (buyer-editable).

Do not add a pin-spacer. The section background is the stage.

TECHNICAL:

React + TypeScript. Virtual progress listeners (wheel non-passive, touch, keys). No GSAP. No ScrollTrigger. No Lenis.

three + @react-three/fiber for helix. Birthstone from Google Fonts for wordmark (or buyer brand font).

prefers-reduced-motion: static mid pose at g 0.45, titles near center, no chase.

Capture helper: window.__msScrollNarrative = { setProgress, getProgress, getTarget, pageOwns, productId: "MS-SEC-HELI01" }. Root data-helix-drive="pin". After release: data-helix-owns="page".

Single default-export component HelixGallerySection plus OrbitHelix. Do not add SmoothScroll or gsap-register.

CUSTOMIZATION LAW:

Every visible string and every card image must be easy to replace. After the default builds, the buyer will tell their AI to restage brand, titles, center lines, concepts copy, nine cards, and stage color until the section feels made for their brand alone.

QUALITY BAR:

It should feel like a private viewing of craft work on a calm board - spatial, intentional, complete. One clear system: No Scroller. Scroll aims the helix. The page stays still until the viewing ends. Never restore gsap. Never add PSAVE.

When done: I should see the full Helix spatial gallery from the files zip (nine cards on a helix, crossing titles, page still during the viewing, then the page owns until dock). Do not add a looping background film. Do not install gsap or lenis. If something is missing, fix it without asking me for code knowledge.

Copy this into Bolt

Select everything in the box area below (all parts if more than one page). Copy, then paste into Bolt. You do not need to understand the technical lines. Your AI does.

Build this as a complete page in Bolt. I am not a professional programmer. You handle all technical setup, libraries, and layout. Show me a working preview.

Build a premium mid-page website SECTION (not a full-bleed hero) for a design-studio gallery brand called HELIX.

This is a SPATIAL GALLERY CAROUSEL. Solid stage color (#C3C3C3 by default, fully recolorable) with a WebGL cylindrical card helix. Cards are the focus so the buyer can load their own work. Do not force a loud underlay film unless the buyer asks for a soft stage treatment.

Prefer the files in the pack. Integrate source/HelixGallerySection.tsx and source/OrbitHelix.tsx. Copy assets/orbit-01.jpg through orbit-09.jpg to public/assets/images/orbit/.

NO SCROLLER (pin-until-complete) (non-negotiable):

One pinned 100dvh stage in normal document flow. The page does NOT physically scroll during the viewing. Do not use position sticky. Do not build a 3vh / 5vh document spacer. Do not overflow-hidden the host page.

VIRTUAL_VIEWPORTS = 5 on desktop, 3 when window.innerWidth < 768. Wheel / trackpad / touch / keys add deltaPx / (viewports * window.innerHeight) to progress g (0 to 1). Titles and helix follow g 1:1 (old scrub:true). At g 0 plus up, or g 1 plus down, RELEASE so the host page can continue.

PIN FREEING (mandatory): after release at g = 1 plus down, the PAGE owns wheel / touch / keys until the stage docks (getBoundingClientRect().top >= -2). Scrolling up in the next section must move the page, not rewind the helix. Pointer on the next sibling never drives the helix.

NOT GSAP ScrollTrigger pin. NOT Lenis. NOT PSAVE. There is no reverse-played film. Do NOT install gsap. Do NOT install lenis.

GALLERY STILLs (required - nine images on the helix - replace with buyer work):

Default demo textures (load order reverse: 09 down to 01):

<https://www.ClickMotion.dev/assets/images/orbit/orbit-01.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-02.jpg>,
<https://www.ClickMotion.dev/assets/images/orbit/orbit-03.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-04.jpg>,
<https://www.ClickMotion.dev/assets/images/orbit/orbit-05.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-06.jpg>,
<https://www.ClickMotion.dev/assets/images/orbit/orbit-07.jpg>, <https://www.ClickMotion.dev/assets/images/orbit/orbit-08.jpg>,
<https://www.ClickMotion.dev/assets/images/orbit/orbit-09.jpg>

If the pack has local files named orbit-01.jpg through orbit-09.jpg, place those at public/assets/images/orbit/ and use those paths.

Each card is a rounded rectangle on a helical ribbon (radius about 12, two full turns, spacing about 6.2). Thin gray guide rails along the path.

The buyer will swap every card for their portfolio, UI frames, campaigns, or product boards. Prefer portrait-ish high-resolution stills without watermarks.

LOOK AND FEEL - EDITORIAL GALLERY (not SaaS glass):

Stage #C3C3C3. Ink #0a0a0a / #1a1a1a. Quiet Swiss board. Private design studio.

Display: geometric sans (Neue Haas / Inter / Helvetica Neue). Wordmark: Birthstone script for demo brand ClickMotion (buyer will rebrand).

Never purple mesh, never Motionsites pill docks, never a required third-party Dribbble button.

SIGNATURE A - CROSSING TITLES:

Giant uppercase "Design in" starts off the left and travels right.

Giant uppercase "motion" starts off the right and travels left.

They peak near center at g about 0.18, then continue out of frame as the journey finishes.

Backface-hidden for clean motion. Both strings are buyer-editable.

Bolt prompt (continued)

SIGNATURE B - CENTER LOCKUP:

Above a quiet uppercase line "Exploring ideas through / daily design practice." place the brand wordmark in Birthstone (default ClickMotion). Fade the lockup after g about 0.55. All of these strings are buyer-editable.

SIGNATURE C - WEBGL HELIX:

React Three Fiber Canvas full viewport, transparent clear, high-performance. Cards ease in from off-path as progress advances (do not seed mid-arc on first paint). Force the canvas to the viewport size (never stuck at 300x150).

LAYOUT:

Section only - no forced page header/footer.

Pin stage 100dvh solid stage color. Virtual earn 5 viewport heights on desktop, 3 on mobile (not page height).

Stack: titles + concepts under the canvas; concepts bottom-left three lines (buyer-editable).

Do not add a pin-spacer. The section background is the stage.

TECHNICAL:

Copy this into Your Smart AI Agent

Select everything in the box area below (all parts if more than one page). Copy, then paste into Your Smart AI Agent. You do not need to understand the technical lines. Your AI does.

You are my smart AI agent. I may not be a professional programmer. Build a complete, production-ready website hero from the brief below. You choose the stack that works in my environment, create every file, use the files zip (source plus nine stills), and deliver a polished preview. Do not leave steps for me that require writing code. When finished, explain in plain English how I view and share the result.

Customize without coding

You never have to open code. After the site is built, start a new message to the same AI and paste one of these lines. Fill in the brackets with your words.

Change the brand wordmark

Ask your AI: "Change the center wordmark from ClickMotion to [YOUR BRAND NAME]. Keep it one line, elegant script or brand font, centered above the small uppercase lines. Update aria-label to match."

Change the giant titles

Ask your AI: "Change the left-entering giant title from Design in to [TITLE A] and the right-entering title from motion to [TITLE B]. Keep uppercase, huge clamp sizing, and the left-to-right / right-to-left cross."

Change the center lines

Ask your AI: "Change the two center uppercase lines to [LINE 1] and [LINE 2]. Keep small tracking under the wordmark and the late-scroll fade."

Change the concepts copy

Ask your AI: "Replace the bottom-left three-line concepts paragraph with [LINE 1] / [LINE 2] / [LINE 3]. Keep left-aligned under the cards in z-order."

Load your nine gallery images

Ask your AI: "Replace orbit-01 through orbit-09 with [YOUR NINE IMAGE PATHS OR DESCRIPTIONS]. Keep rounded cards, helix path, and high-quality textures. If I only give descriptions, generate tasteful boards that match [BRAND TONE]."

Change stage and type color

Ask your AI: "Change the stage color #C3C3C3 to [STAGE HEX] and type ink to [INK HEX]. Keep the section background matched to the stage so there is no flash when the pin releases. Keep wordmark readable."

Brand voice pass

Ask your AI: "Rewrite every visible string so the voice matches [BRAND VOICE]. Do not change helix math or No Scroller behavior unless I ask."

Pin freeing if scroll feels stuck after the last moment

Ask your AI: "After the last moment, scrolling down must release the pin. Then the PAGE owns the wheel until the section docks at the top again. Scrolling up in the next section must move the page, not rewind the helix. Pointer on the next sibling must never drive the helix."

Something looks wrong

Ask your AI: "Something is broken: [DESCRIBE WHAT YOU SEE]. Fix it and keep Helix as a spatial mid-page gallery with No Scroller (pin-until-complete), helix cards, and crossing titles. Keep pin freeing (page owns until dock). Do not restore gsap, lenis, SmoothScroll, or a tall multi-vh sticky track. Do not add PSAVE. Do not ask me to write code."

New gallery cards (optional)

This product has no hero film. Only if you want new card art: generate nine portrait stills, then ask your coding AI to swap the files in the pack.

COPY THIS INTO A VIDEO AI

Generate nine premium UI/design mock stills for the helix cards (portrait boards, fashion / product / editorial) as orbit-01.jpg through orbit-09.jpg, clean, high resolution, no watermarks, consistent lighting. Or replace with the buyer's own nine images when provided.

Then tell your coding AI

Ask your AI: "Replace orbit-01.jpg through orbit-09.jpg with [MY NINE IMAGES]. Keep the same Helix No Scroller pin, helix math, and crossing titles. Do not add a background film."

You are ready

- Your rebuild files are in the files zip (START-HERE.md, source, and assets).
- Pick one AI tool (or Your Smart AI Agent), paste that full prompt, and let it build.
- Customize by asking your AI in plain English. You do not need to know React or other frameworks.
- Brand site: www.ClickMotion.dev

ClickMotion

www.ClickMotion.dev

If something fails, paste the error into your AI and say: "Fix this for me without asking me to write code."
